ASSP

3-Channel 10-Bit D/A Converter

MB40950

DESCRIPTION

The MB40950 is a 10-bit resolution high-speed digital-to-analog converter, designed for video processing applications such as TVsets and VCRs.

The MB40950 has 10-bit resolution 3 channels D/A converters. Digital data are input to the 10-bit digital input ports, and the input digital data are converted into the analog data in minimum 60 Mega sample per seconds (MSPS). The analog output voltage is provided in a range of DC +3V to +5V (2Vp-p level).

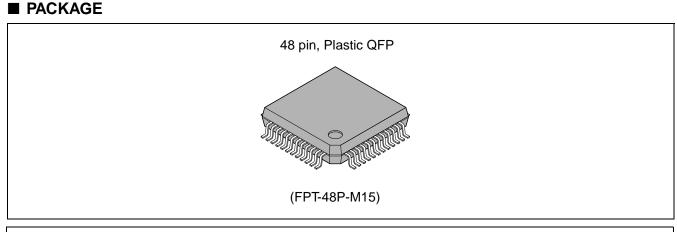

The MB40950 is fabricated by the Fujitsu's advanced bipolar process and housed in a 48-pin plastic QFP.

The MB40950 is designed for video signal processing, and it is suitable for TVs and VCRs applications.

FEATURES

- 10-bit x 3 channels D/A converters
- Max. 60 MHz input clock frequency providing 60 MSPS data conversion rate
- Linearity error : Max. +/-0.07%
- Analog output voltage range : 3V to 5V (2Vp-p level)
- Digital input voltage level : TTL level
- · On-chip reference voltage generator

(Continued)

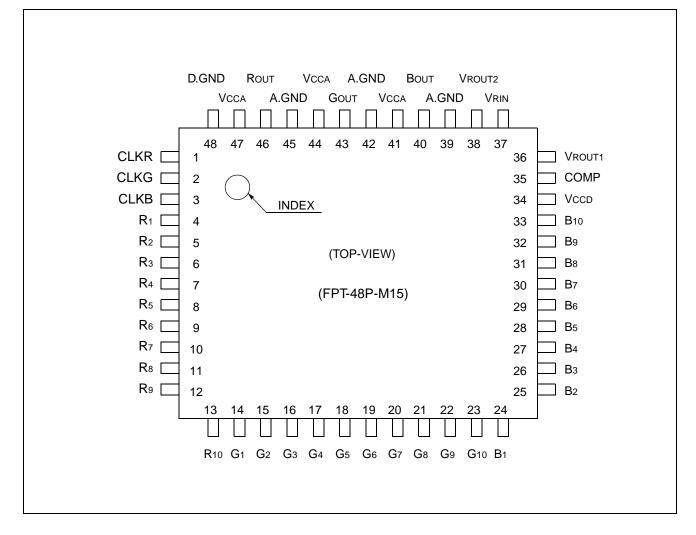

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.

(Continued)

- Low power consumption :
 - Typical 460mW at 2Vp-p analog output voltage
 - Typical 350mW at 1Vp-p analog output voltage
- Single +5V power supply
- Operating temperature range : -20°C to +70°C
- Fujitsu's advanced bipolar process
- Package : 48-pin plastic QFP (Suffix : -PF)

■ PIN ASSIGNMENT

■ PIN DESCRIPTION

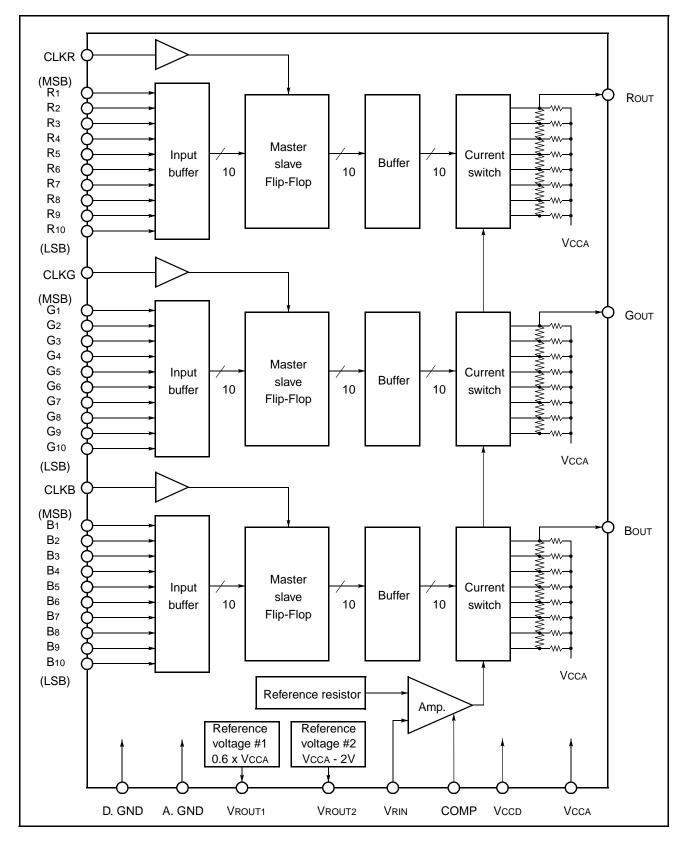

Symbol	Pin No.	Туре	Name & Function			
Power Supply						
VCCD	34		+5V DC power supply pins for digital block.			
D. GND	48		Ground pin for digital block.			
VCCA	41, 44, 47		DC power supply pins for analog block.			
A. GND	39, 42, 45	—	Ground pins for analog block.			
Clock						
CLKR	1	I	Clock input pin for R channel.			
CLKG	2	I	Clock input pin for G channel.			
CLKB	3	I	Clock input pin for B channel.			
Digital Input						
R1 R2 R3 R4 R5 R6 R7 R8 R9 R10	4 5 6 7 8 9 10 11 12 13	I	Digital data input pins for R channel. 10-bit data is input to the pins. The R1 pin is the MSB and the R10 pin is the LSB.			
G1 G2 G3 G4 G5 G6 G7 G8 G9 G10	14 15 16 17 18 19 20 21 22 23	I	Digital data input pins for G channel. 10-bit data is input to the pins. The G1 pin is the MSB and the G10 pin is the LSB.			
B1 B2 B3 B4 B5 B6 B7 B8 B9 B10	24 25 26 27 28 29 30 31 32 33	Ι	Digital data input pins for B channel. 10-bit data is input to the pins. The B1 pin is the MSB and the B10 pin is the LSB.			

(Continued)

(Continued)

Symbol	Pin No.	Туре	Name & Function				
Analog Output	•						
Rout	46	0	Analog signal output pin for R channel.				
Gout	43	0	Analog signal output pin for G channel.				
Βουτ	40	0	Analog signal output pin for B channel.				
Reference Volta	ge						
Vrin	37	I	Reference voltage input pin. This pin is used to set the analog output dynamic range. When the internal reference voltage is used, this pin is connected with VROUT1 pin (36 pin) or VROUT2 pin (38 pin). When the reference voltage is supplied from the external generator, 2.65V to 4.3V or VCCA - VRIN = 0.7V to 2.2V is input to this pin.				
Vrout1	36	0	Reference voltage output #1 pin. The output voltage is set to 0.6 x VCCA by the resistor divided method. When this pin is connected with VRIN pin (37 pin), an analog voltage is output from this pin in a range of 0.6 x VCCA to VCCA.				
Vrout2	38	0	Reference voltage output #2 pin. The output voltage is set to VCCA - 2V by the band-gap reference method. When this pin is connected with VRIN pin (37 pin), an analog voltage is output from this pin in a range of VCCA - 2V to VCCA.				
Compesation Ca	Compesation Capacitor						
COMP	35	-	Phase compesation capacitor pin. A phase compesation capacitor of $0.1\mu F$ or greater is connected between this pin and A. GND pin.				

BLOCK DIAGRAM

■ ABSOLUTE MAXIMUM RATINGS

(A.	GND =	D. (GND	= 0V)
-----	-------	------	-----	-------

		· ·	,
Parameter	Symbol	Rating	Unit
Power supply voltage	Vcca, Vccd	-0.5 to +7.0	V
Power supply voltage difference	Vccd – Vcca	1.5	V
Analog reference voltage	Vrin	-0.5 to Vcca +7.0	V
Digital input voltage	Vid	-0.5 to +7.0	V
Storage temperature	Tstg	-55 to +125	°C

Note: Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

■ RECOMMENDED OPERATING CONDITIONS

			(A. G	ND = D.G	ND = 0V	
Parameter	Symbol		Value			
Farameter	Symbol	Min.	Тур.	Max.	Unit	
Power supply voltage	Vcca, Vccd	4.75	5.00	5.25	V	
Power supply voltage difference	Vcca – Vccd	-0.2	—	0.2	V	
	Vcca – Vrin	0.70	2.00	2.20	V	
Analog reference voltage	Vrin	2.65	3.00	4.30	V	
Digital "H" level input voltage	Vihd	2.0		—	V	
Digital "L" level input voltage	Vild		—	0.8	V	
Clock frequency	fclк		—	60	MHz

2. AC Characteristics

Parameter	Symbol	Value			Unit	Remark	
Falameter	Symbol	Min.	Тур.	Max.	Unit	Remark	
Maximum conversion rate	Fs	60	—		MSPS		
Output propagation delay time	tpd	_	7		ns	Terminated A. OUT pin with 240Ω, CL = 15pF	
Output rising time	tr	_	5		ns		
Output falling time	tf	_	5		ns		
Setting time	tset		17.5	—	ns		

■ AC TIMING CHART

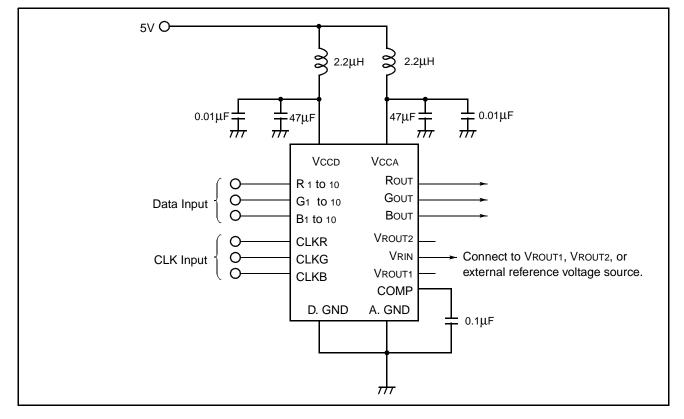

■ DAC OUTPUT VOLTAGE RANGE

■ CALCULATION OF DAC OUTPUT VOLTAGE AT IDEAL CONVERSION

ROUT (GOUT, BOUT) = VCCA $-\frac{1023 - N}{1024}$ X (VCCA - VRIN) [N : Digital Input Code (0 to 1023)] VOFS = VCCA VOZS = VCCA $-\frac{1023}{1024}$ X (VCCA - VRIN)

TYPICAL CONNECTION EXAMPLE

NOTES ON USE

1. Power Supply Patterns of the PCB

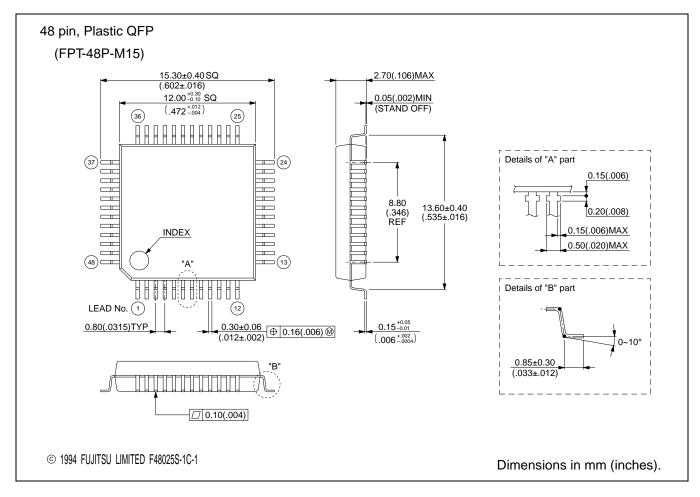

The power supply wire patterns (Vcc and GND patterns) of the PCB should be designed as wide as possible in order to reduce parasitic impedance.

2. Switching Noise

In order to reduce switching noise as much as possible, noise limit capacitor must be connected between VCCD and D. GND pins and VCCA and A. GND pins.

In this case, the capacitor should be connected to the GND pins side as near as possible.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.). CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
