

NPN SILICON HIGH FREQUENCY TRANSISTOR

NE021 SERIES

FEATURES

- HIGH INSERTION GAIN: 18.5 dB at 500 MHz
- LOW NOISE FIGURE: 1.5 dB at 500 MHz
- HIGH POWER GAIN: 12 dB at 2 GHz
- LARGE DYNAMIC RANGE: 19 dBm at 1 dB 2 GHz Gain Compression

DESCRIPTION AND APPLICATIONS

The NE021 series of NPN silicon transistors provides economical solutions to wide ranges of amplifier and oscillator problems. Low noise and high current capability provide wide dynamic ranges; the excellent linearity of S_{21} with collector current assures low intermodulation distortion. The NE021 series is available as a chip or in several package styles. The series uses the NEC gold, platinum, titanium, and platinum-silicide metallization system to provide the utmost in reliability. Most package options are available with Grade C (JANTXV equivalent) and Grade CX (JANTX equivalent) reliability screening. Some packages are available in both common-base and common-emitter configurations. The NE02103 and the NE02107 have been qualified for high-reliability space applications.

Notes:

- Electronic Industrial Association of Japan.
- C_{CB} measurement employs a three-terminal capacitance bridge incorporating a guard circuit. The emitter terminal shall be connected to the guard terminal.
- Minimum dissipation based on R_{TH(J-A)} for applications without effective heatsink, maximum dissipation based on R_{TH(μ-C)} for applications with effective heatsink.
