

16-bit Proprietary Microcontroller

CMOS

F²MC-16LX MB90350 Series

MB90F352/S, MB90352/S

■ DESCRIPTION

The MB90350-series with 1 channel FULL-CAN* interface and FLASH ROM is especially designed for automotive and industrial applications. Its main feature is the on-board CAN Interface, which conform to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach. With the new 0.35 µm CMOS technology, Fujitsu now offers on-chip FLASH-ROM program memory up to 128 Kbytes. An internal voltage booster removes the necessity for a second programming voltage.

An on board voltage regulator provides 3 V to the internal MCU core. This creates a major advantage in terms of EMI and power consumption.

The internal PLL clock frequency multiplier provides an internal 42 ns instruction cycle time from an external 4 MHz clock.

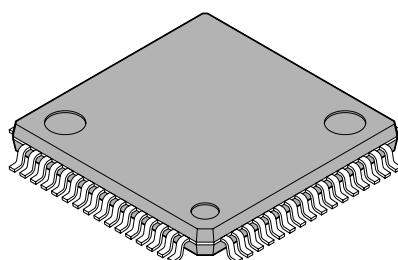

The unit features a 4 channel Output Compare Unit and 6 channel Input Capture Unit with 2 separate 16-bit free running timers. 2 channels UART constitute additional functionality for communication purposes.

Note : F²MC stands for FUJITSU Flexible Microcontroller, a registered trademark of FUJITSU LIMITED.

■ PACKAGE

64-pin Plastic LQFP

(FPT-64P-M09)

MB90350 Series

■ FEATURES

- **Clock**

- Built-in PLL clock frequency multiplication circuit
- Selection of machine clocks (PLL clocks) is allowed among frequency division by two on oscillation clock, and multiplication of 1 to 6 times of oscillation clock (for 4 MHz oscillation clock, 4 MHz to 24 MHz).
- Operation by sub-clock (up to 50 kHz : 100 kHz oscillation clock divided by two) is allowed. (devices without S-suffix only)
- Minimum execution time of instruction : 42 ns (when operating with 4-MHz oscillation clock, and 6-time multiplied PLL clock).
- Built-in clock modulation circuit

- **16 Mbyte CPU memory space**

- 24-bit internal addressing

- **External Bus Interface**

- 4 MByte external memory space

- **Instruction system best suited to controller**

- Wide choice of data types (bit, byte, word, and long word)
- Wide choice of addressing modes (23 types)
- Enhanced multiply-divide instructions and RETI instructions
- Enhanced high-precision computing with 32-bit accumulator

- **Instruction system compatible with high-level language (C language) and multitask**

- Employing system stack pointer
- Enhanced various pointer indirect instructions
- Barrel shift instructions

- **Increased processing speed**

- 4-byte instruction queue

- **Powerful interrupt function**

- Powerful 8-level, 34-condition interrupt feature
- Up to 8 channels external interrupts are supported

- **Automatic data transfer function independent of CPU**

- Extended intelligent I/O service function (EI²OS) : up to 16 channels
- DMA : up to 16 channels

- **Low power consumption (standby) mode**

- Sleep mode (a mode that halts CPU operating clock)
- Main timer mode (a timebase timer mode switched from the main clock mode)
- PLL timer mode (a timebase timer mode switched from the PLL clock mode)
- Watch mode (a mode that operates sub clock and clock timer only)
- Stop mode (a mode that stops oscillation clock and sub clock)
- CPU blocking operation mode

- **Process**

- CMOS technology

- **I/O port**

- General-purpose input/output port (CMOS output)
 - 49 ports (devices without S-suffix)
 - 51 ports (devices with S-suffix)

(Continued)

(Continued)

- **Timer**
 - Time-base timer, clock timer, watchdog timer : 1 channel
 - 8/16-bit PPG timer : 8-bit × 10 channels, or 16-bit × 6 channels
 - 16-bit reload timer : 4 channels
 - 16-bit input/output timer
 - 16-bit free run timer : 2 channels (FRT0 : ICU0/1, FRT1 : ICU 4/5/6/7, OCU 4/5/6/7)
 - 16-bit input capture: (ICU) : 6 channels
 - 16-bit output compare : (OCU) : 4 channels

- **Full-CAN interface : 1 channel**
 - Compliant with Ver2.0A and Ver2.0B CAN specifications
 - Flexible message buffering (mailbox and FIFO buffering can be mixed)
 - CAN wake-up function

- **UART (LIN/SCI) : 2 channels**
 - Equipped with full-duplex double buffer
 - Clock-asynchronous or clock-synchronous serial transmission is available

- **I²C interface* : 1 channel**
 - Up to 400 Kbit/s transfer rate

- **DTP/External interrupt : 8 channels, CAN wakeup : 1 channel**
 - Module for activation of extended intelligent I/O service (EI²OS), DMA, and generation of external interrupt.

- **Delay interrupt generator module**
 - Generates interrupt request for task switching.

- **8/10-bit A/D converter : 15 channels**
 - Resolution is selectable between 8-bit and 10-bit.
 - Activation by external trigger input is allowed.
 - Conversion time : 3 µs (at 24-MHz machine clock, including sampling time)

- **Program patch function**
 - Address matching detection for 6 address pointers.

- **Internal voltage regulator**
 - Supports 3 V MCU core, offering low EMI and low power consumption figures

- **Programmable input levels**
 - Automotive/CMOS-Schmitt (initial level is Automotive in Single chip mode)
 - TTL level (initial level for External bus mode)

- **Flash security function**
 - Protects the content of Flash (Flash device only)

* : I²C license :

Purchase of Fujitsu I²C components conveys a license under the Philips I²C Patent Rights to use, these components in an I²C system provided that the system conforms to the I²C Standard Specification as defined by Philips.

MB90350 Series

■ PRODUCT LINEUP

Parameter	Part Number MB90F352/S, MB90352/S*1	MB90V340A-101/102
CPU	F ² MC-16LX CPU	
System clock	On-chip PLL clock multiplier ($\times 1, \times 2, \times 3, \times 4, \times 6, 1/2$ when PLL stops) Minimum instruction execution time : 42 ns (4 MHz osc. PLL $\times 6$)	
ROM	Boot-block, Flash memory 128 Kbytes	External
RAM	4 Kbytes	30 Kbytes
Emulator-specific power supply*2	—	Yes
Technology	0.35 μ m CMOS with regulator for internal power supply + Flash memory charge pump for programming voltage	0.35 μ m CMOS with regulator for internal power supply
Operating voltage range	3.5 V - 5.5 V : at normal operating (not using A/D converter) 4.0 V - 5.5 V : at using A/D converter/Flash programming 4.5 V - 5.5 V : at using external bus	5 V \pm 10%
Temperature range	-40 °C to +105 °C (125 °C up to 16 MHz machine clock)	—
Package	LQFP-64	PGA-299
UART	2 channels Wide range of baud rate settings using a dedicated reload timer Special synchronous options for adapting to different synchronous serial protocols LIN functionality working either as master or slave LIN device	3 channels
I ² C (400 kbit/s)	1 channel	1 channel
A/D Converter	15 channels 10-bit or 8-bit resolution Conversion time : Min 3 μ s include sample time (per one channel)	
16-bit Reload Timer (4 channels)	Operation clock frequency : fsys/2 ¹ , fsys/2 ³ , fsys/2 ⁵ (fsys = Machine clock frequency) Supports External Event Count function	
16-bit I/O Timer (2 channels)	Signals an interrupt when overflowing Supports Timer Clear when a match with Output Compare (Channel 0, 4) Operation clock freq. : fsys, fsys/2 ¹ , fsys/2 ² , fsys/2 ³ , fsys/2 ⁴ , fsys/2 ⁵ , fsys/2 ⁶ , fsys/2 ⁷ (fsys = Machine clock freq.) I/O Timer 0 (clock input FRCK0) corresponds to ICU 0/1 I/O Timer 1 (clock input FRCK1) corresponds to ICU 4/5/6/7, OCU 4/5/6/7	
16-bit Output Compare (4 channels)	Signals an interrupt when 16-bit I/O Timer match output compare registers. A pair of compare registers can be used to generate an output signal.	
16-bit Input Capture (6 channels)	Rising edge, falling edge or rising & falling edge sensitive Signals an interrupt upon external event

MB90350 Series

Part Number Parameter	MB90F352/S, MB90352/S*1	MB90V340A-101/102
8/16-bit Programmable Pulse Generator 6 channels (16-bit) / 10 channels (8-bit)	Supports 8-bit and 16-bit operation modes 8-bit reload counters × 12 8-bit reload registers for L pulse width × 12 8-bit reload registers for H pulse width × 12 A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler + 8-bit reload counter Operation clock freq. : fsys, fsys/2 ¹ , fsys/2 ² , fsys/2 ³ , fsys/2 ⁴ or 128 µs@fosc = 4 MHz (fsys = Machine clock frequency, fosc = Oscillation clock frequency)	
CAN Interface	1 channel Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID's Supports multiple messages Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps	2 channels
External Interrupt (8 channels)	Can be used rising edge, falling edge, starting up by H/L level input, external interrupt, extended intelligent I/O services (EI ² OS) and DMA	
D/A converter	—	1 channel
Subclock (up to 100 kHz)	devices with 'S'-suffix and MB90V340A-102 : without subclock devices without 'S'-suffix and MB90V340A-101 : with subclock	
I/O Ports	Virtually all external pins can be used as general purpose I/O port All push-pull outputs Bit-wise settable as input/output or peripheral signal Settable as CMOS schmitt trigger/ automotive inputs (default) TTL input level settable for external bus (30 terminals only for external bus)	
Flash Memory	Supports automatic programming, Embedded Algorithm TM *3 Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Number of erase cycles : 10,000 times Data retention time : 10 years Boot block configuration Erase can be performed on each block Block protection with external programming voltage Flash Security Feature for protecting the content of the Flash	—

*1 : The devices are under development.

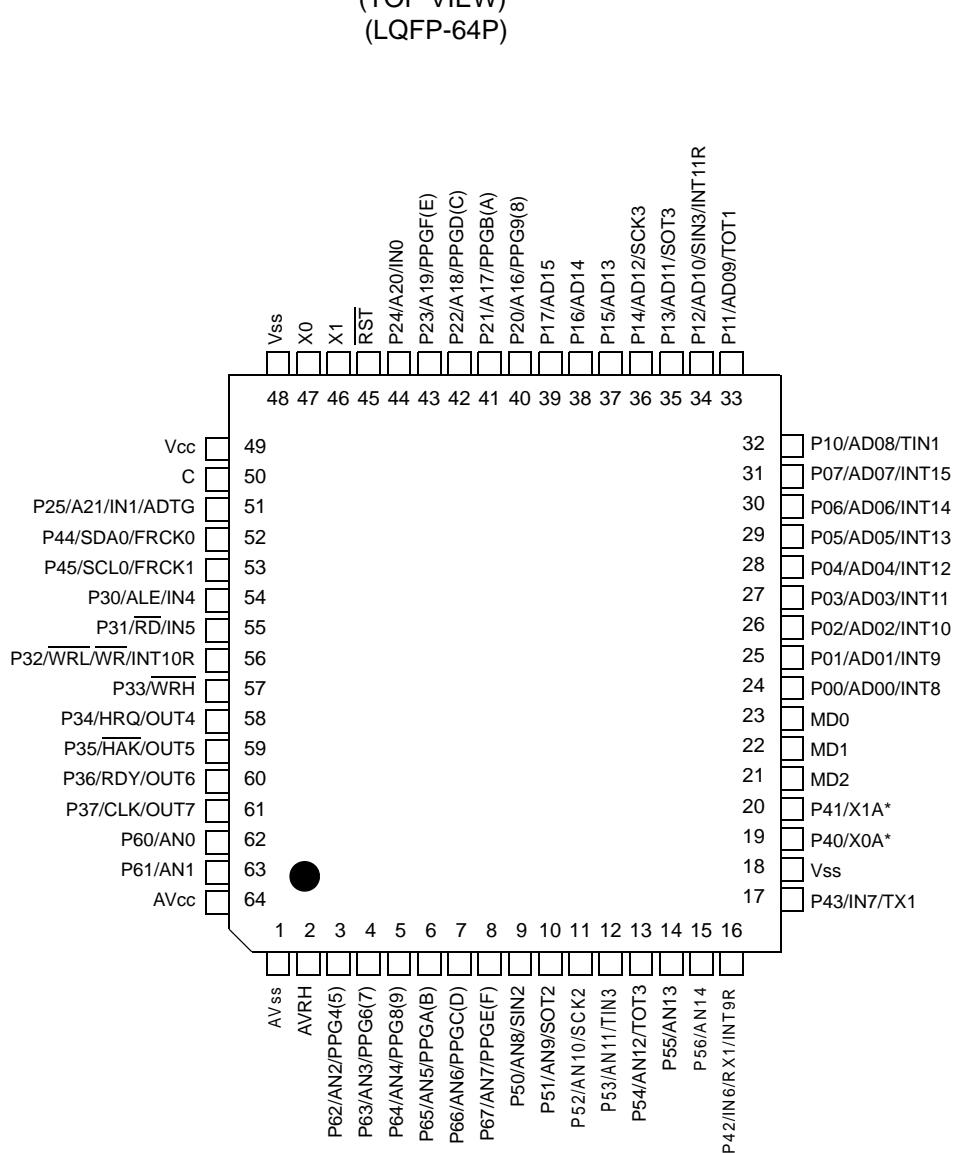

*2 : It is setting of Jumper switch (TOOL V_{cc}) when Emulator (MB2147-01) is used.
Please refer to the Emulator hardware manual about details.

*3 : Embedded Algorithm is a trade mark of Advanced Micro Devices Inc.

■ PIN ASSIGNMENTS

- MB90F352/S, MB90352/S

(FPT-64P-M09)

* : MB90F352/352 : X0A, X1A
MB90F352S/352S : P40, P41

■ PIN DESCRIPTION

Pin No. LQFP64*	Pin name	Circuit type	Function
46	X1	A	Oscillation output pin.
47	X0		Oscillation input pin.
45	<u>RST</u>	E	Reset input pin.
3 to 8	P62 to P67	I	General purpose I/O ports.
	AN2 to AN7		Analog input pins for A/D converter.
	PPG4, 6, 8, A, C, E		Output pins for PPGs.
9	P50	O	General purpose I/O port.
	AN8		Analog input pin for A/D converter.
	SIN2		Serial data input pin for UART2.
10	P51	I	General purpose I/O port.
	AN9		Analog input pin for A/D converter.
	SOT2		Serial data output pin for UART2.
11	P52	I	General purpose I/O port.
	AN10		Analog input pin for A/D converter.
	SCK2		Serial data output pin for UART2.
12	P53	I	General purpose I/O port.
	AN11		Analog input pin for A/D converter.
	TIN3		Event input pin for reload timer3.
13	P54	I	General purpose I/O port.
	AN12		Analog input pin for A/D converter.
	TOT3		Output pin for reload timer3.
14, 15	P55, P56	I	General purpose I/O ports.
	AN13, AN14		Analog input pins for A/D converter.
16	P42	F	General purpose I/O port.
	IN6		Data sample input pin for input capture ICU6.
	RX1		RX input pin for CAN1.
	INT9R		External interrupt request input pin for INT9.
17	P43	F	General purpose I/O port.
	IN7		Data sample input pin for input capture ICU7.
	TX1		TX output pin for CAN1.
19, 20	P40, P41	F	General purpose I/O ports (devices with S-suffix and MB90V340A-101) .
	X0A, X1A	B	Oscillation input pins for sub clock (devices without S-suffix and MB90V340A-102) .

MB90350 Series

Pin No. LQFP64*	Pin name	Circuit type	Function
24 to 31	P00 to P07	G	General purpose I/O ports. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD00 to AD07		Input/output pins of external address data bus lower 8 bit. This function is enabled when the external bus is enabled.
	INT8 to INT15		External interrupt request input pins for INT8 to INT15.
32	P10	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD08		Input/output pin for external bus address data bus bit 8. This function is enabled when external bus is enabled.
	TIN1		Event input pin for reload timer1.
33	P11	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD09		Input/output pin for external bus address data bus bit 9. This function is enabled when external bus is enabled.
	TOT1		Output pin for reload timer1.
34	P12	N	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD10		Input/output pin for external bus address data bus bit 10. This function is enabled when external bus is enabled.
	SIN3		Serial data input pin for UART3.
	INT11R		External interrupt request input pin for INT11
35	P13	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD11		Input/output pin for external bus address data bus bit 11. This function is enabled when external bus is enabled.
	SOT3		Serial data output pin for UART3.
36	P14	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD12		Input/output pin for external bus address data bus bit 12. This function is enabled when external bus is enabled.
	SCK3		Clock input/output pin for UART3.
37	P15	N	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD13		Input/output pin for external bus address data bus bit 13. This function is enabled when external bus is enabled.
38	P16	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD14		Input/output pin for external bus address data bus bit 14. This function is enabled when external bus is enabled.

MB90350 Series

Pin No. LQFP64*	Pin name	Circuit type	Function
39	P17	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	AD15		Input/output pin for external bus address data bus bit 15. This function is enabled when external bus is enabled.
40 to 43	P20 to P23	G	General purpose I/O ports. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A16 to A19		Output pins for A16 to A19 of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pins are enabled as high address output pins A16 to A19.
	PPG9, PPGB, PPGD, PPGF		Output pins for PPGs.
44	P24	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A20		Output pins for A20 of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pin is enabled as high address output pins A20.
	IN0		Data sample input pin for input capture ICU0.
51	P25	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
	A21		Output pin for A21 of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pin is enabled as high address output pin A21.
	IN1		Data sample input pin for input capture ICU1.
	ADTG		Trigger input pin for A/D converter.
52	P44	H	General purpose I/O port
	SDA0		Serial data I/O pin for I ² C 0
	FRCK0		Input pin for the 16-bit I/O Timer 0
53	P45	H	General purpose I/O port.
	SCL0		Serial clock I/O pin for I ² C 0
	FRCK1		Input for the 16-bit I/O Timer 1
54	P30	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	ALE		Address latch enable output pin. This function is enabled when external bus is enabled.
	IN4		Data sample input pin for input capture ICU4.

(Continued)

MB90350 Series

Pin No. LQFP64*	Pin name	Circuit type	Function
55	P31	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	<u>RD</u>		Read strobe output pin for data bus. This function is enabled when external bus is enabled.
	IN5		Data sample input pin for input capture ICU5.
56	P32	G	General purpose I/O port. The register can be set to select whether to use pull-up resistor. This function is enabled either in single-chip mode or with the WR/WRL pin output disabled.
	<u>WR/WRL</u>		Write strobe output pin for the data bus. This function is enabled when both the external bus and the WR/WRL pin output are enabled. <u>WRL</u> is used to write-strobe 8 lower bits of the data bus in 16-bit access. <u>WR</u> is used to write-strobe 8 bits of the data bus in 8-bit access.
	INT10R		External interrupt request input pin for INT10.
57	P33	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the WRH pin output disabled.
	<u>WRH</u>		Write strobe output pin for the 8 higher bits of the data bus. This function is enabled when the external bus is enabled, when the external bus 16-bit mode is selected, and when the WRH output pin is enabled.
58	P34	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
	HRQ		Hold request input pin. This function is enabled when both the external bus and the hold function are enabled.
	OUT4		Waveform output pin for output compare OCU4.
59	P35	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
	<u>HAK</u>		Hold acknowledge output pin. This function is enabled when both the external bus and the hold function are enabled.
	OUT5		Waveform output pin for output compare OCU5.
60	P36	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the external ready function disabled.
	RDY		Ready input pin. This function is enabled when both the external bus and the external ready function are enabled.
	OUT6		Waveform output pin for output compare OCU6.
61	P37	G	General purpose I/O port. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the CLK output disabled.
	CLK		CLK output pin. This function is enabled when both the external bus and CLK output are enabled.
	OUT7		Waveform output pin for output compare OCU7.

MB90350 Series

(Continued)

Pin No. LQFP64*	Pin name	Circuit type	Function
62, 63	P60, P61	I	General purpose I/O ports.
	AN0, AN1		Analog input pins for A/D converter.
64	AV _{cc}	K	V _{cc} power input pin for analog circuits.
2	AVRH	L	Reference voltage input for the A/D converter. This power supply must be turned on or off while a voltage higher than or equal to AVRH is applied to AV _{cc} .
1	AV _{ss}	K	V _{ss} power input pin for analog circuits.
22, 23	MD1, MD0	C	Input pins for specifying the operating mode.
21	MD2	D	Input pins for specifying the operating mode.
49	V _{cc}	—	Power (3.5 V to 5.5 V) input pin.
18, 48	V _{ss}	—	Power (0 V) input pins.
50	C	K	This is the power supply stabilization capacitor pin. It should be connected to a higher than or equal to 0.1 μF ceramic capacitor.

MB90350 Series

■ HANDLING DEVICES

Special care is required for the following when handling the device :

- Preventing latch-up
- Treatment of unused pins
- Using external clock
- Precautions for when not using a sub clock signal
- Notes on during operation of PLL clock mode
- Power supply pins (V_{cc}/V_{ss})
- Pull-up/down resistors
- Crystal Oscillator Circuit
- Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs
- Connection of Unused Pins of A/D Converter
- Notes on Energization
- Stabilization of power supply voltage
- Initialization
- Port0 to port3 output during Power-on (External-bus mode)
- Notes on using CAN Function
- Flash security Function

1. Preventing latch-up

CMOS IC chips may suffer latch-up under the following conditions :

- A voltage higher than V_{cc} or lower than V_{ss} is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between V_{cc} and V_{ss}.
- The AV_{cc} power supply is applied before the V_{cc} voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

For the same reason, also be careful not to let the analog power-supply voltage (AV_{cc}, AVRH) exceed the digital power-supply voltage.

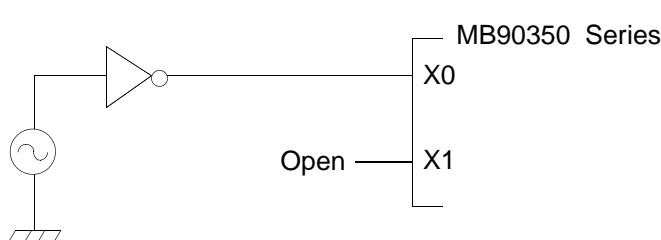

2. Handling unused pins

Leaving unused input pins open may result in misbehavior or latch up and possible permanent damage of the device. Therefore they must be pulled up or pulled down through resistors. In this case those resistors should be more than 2 kΩ .

Unused bidirectional pins should be set to the output state and can be left open, or the input state with the above described connection.

3. Using external clock

To use external clock, drive the X0 pin and leave X1 pin open.

4. Precautions for when not using a sub clock signal

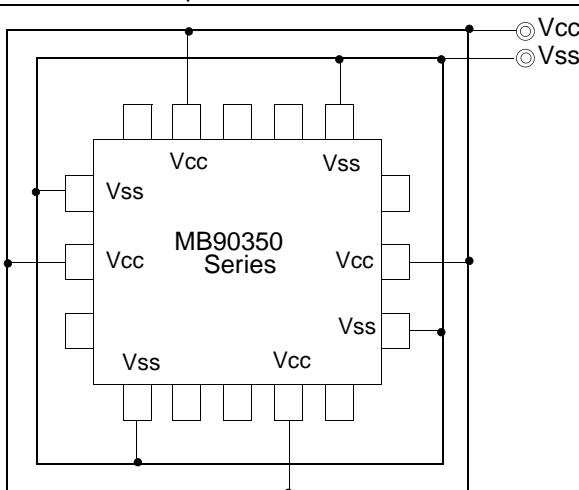

If you do not connect pins X0A and X1A to an oscillator, use pull-down handling on the X0A pin, and leave the X1A pin open.

5. Notes on during operation of PLL clock mode

If the PLL clock mode is selected, the microcontroller attempt to be working with the self-oscillating circuit even when there is no external oscillator or external clock input is stopped. Performance of this operation, however, cannot be guaranteed.

6. Power supply pins (V_{cc}/V_{ss})

- If there are multiple V_{cc} and V_{ss} pins, from the point of view of device design, pins to be of the same potential are connected inside of the device to prevent such malfunctioning as latch up.
To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and observe the standard for total output current, be sure to connect the V_{cc} and V_{ss} pins to the power supply and ground externally.
- Connect V_{cc} and V_{ss} to the device from the current supply source at a low impedance.
- As a measure against power supply noise, connect a capacitor of about 0.1 μ F as a bypass capacitor between V_{cc} and V_{ss} in the vicinity of V_{cc} and V_{ss} pins of the device

7. Pull-up/down resistors

The MB90350 Series does not support internal pull-up/down resistors (Port 0 to Port 3: built-in pull-up resistors). Use external components where needed.

8. Crystal Oscillator Circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0 and X1 pins with a ground area for stabilizing the operation.

9. Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply (AV_{cc}, AVR_H) and analog inputs (AN0 to AN14) after turning-on the digital power supply (V_{cc}).

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed AVR_H or AV_{cc} (turning on/off the analog and digital power supplies simultaneously is acceptable).

10. Connection of Unused Pins of A/D Converter if A/D Converter is used

Connect unused pins of A/D converter to AV_{cc} = V_{cc}, AV_{ss} = AVR_H = V_{ss}.

MB90350 Series

11. Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 or more μ s (0.2 V to 2.7 V)

12. Stabilization of power supply voltage

A sudden change in the supply voltage may cause the device to malfunction even within the specified V_{CC} supply voltage operating range. Therefore, the V_{CC} supply voltage should be stabilized.

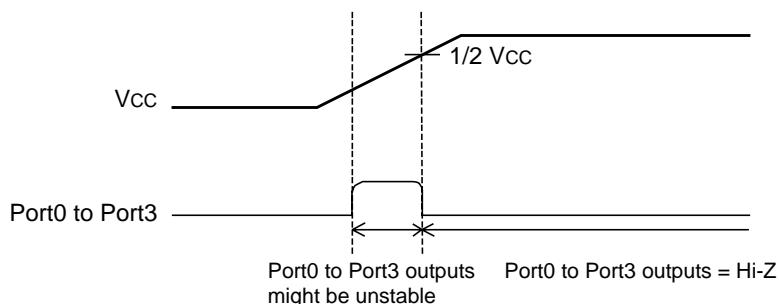

For reference, the supply voltage should be controlled so that V_{CC} ripple variations (peak-to-peak value) at commercial frequencies (50 Hz to 60 Hz) fall below 10% of the standard V_{CC} supply voltage and the coefficient of fluctuation does not exceed 0.1 V/ms at instantaneous power switching.

13. Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, turn on the power again.

14. Port 0 to port 3 output during Power-on (External-bus mode)

As shown below, when power is turned on in External-Bus mode, there is a possibility that output signal of Port 0 to Port 3 might be unstable.

15. Notes on using CAN Function

To use CAN function, please set '1' to DIRECT bit of CAN Direct Mode Register (CDMR).

If DIRECT bit is set to '0' (initial value), wait states will be performed when accessing CAN registers.

Please refer to Hardware Manual of MB90350 series for detail of CAN Direct Mode Register.

16. Flash security Function

The security byte is located in the area of the flash memory.

If protection code $01H$ is written in the security bit, the flash memory is in the protected state by security.

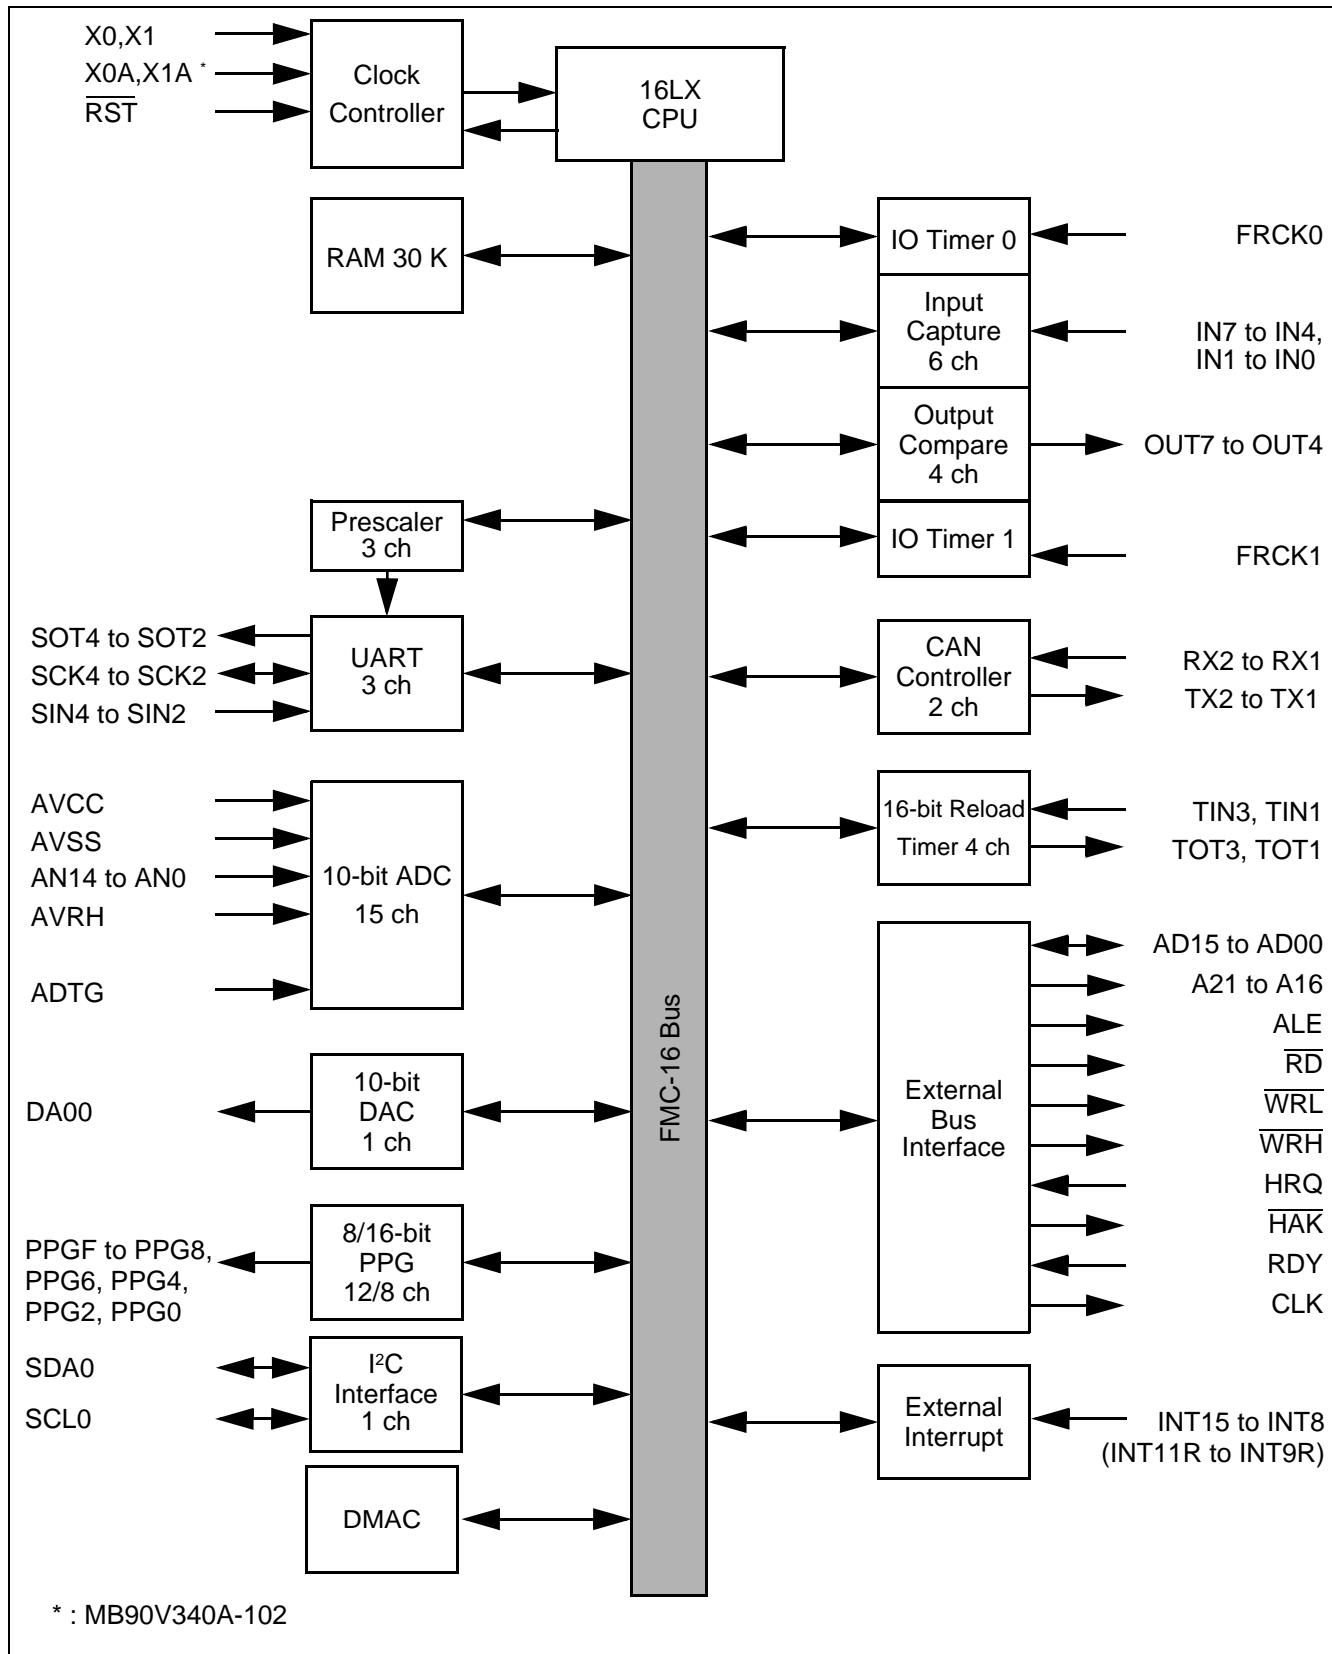

Therefore please do not write $01H$ in this address if you do not use the security function.

Please refer to following table for the address of the security bit.

	Flash memory size	Address for security bit
MB90F352	Embedded 1 Mbit Flash Memory	FE0001H

■ MEMORY MAP

Note : The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits are the same, the table in ROM can be referenced without using the far specification in the pointer declaration.

For example, an attempt to access 00C000_H accesses the value at FFC000_H in ROM.

The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

The image between FF8000_H and FFFFFF_H is visible in bank 00, while the image between FF0000_H and FF7FFF_H is visible only in bank FF.

7D00 _H to 7DFF _H	Reserved for CAN Interface 1. Refer to "■ CAN CONTROLLERS"					
7E00 _H to 7FFF _H	Reserved					

Notes : • Initial value of "X" represents unknown value.

- Addresses in the range 0000_H to 00BF_H, which are not listed in the table, are reserved for the primary functions of the MCU. A read access to these reserved addresses results reading "X" and any write access should not be performed.

■ CAN CONTROLLERS

The CAN controller has the following features :

- Conforms to CAN Specification Version 2.0 Part A and B
 - Supports transmission/reception in standard frame and extended frame formats
- Supports transmitting of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
 - 29-bit ID and 8-byte data
 - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
 - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbits/s to 2 Mbits/s (when input clock is at 16 MHz)

Y1 : Usable

Y2 : Usable, with EI²OS stop function

N : Unusable

- Notes :
- The peripheral resources sharing the ICR register have the same interrupt level.
 - When two peripheral resources share the ICR register, only one can use Extended Intelligent I/O Service at a time.
 - When either of the two peripheral resources sharing the ICR register specifies Extended Intelligent I/O Service, the other one cannot use interrupts.

MB90350 Series

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

($V_{SS} = AV_{SS} = 0 \text{ V}$)

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage	V_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}^{*1}$
	AV_{RH}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AV_{RH}^{*1}$
Input voltage	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	^{*2}
Output voltage	V_O	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	^{*2}
Maximum Clamp Current	I_{CLAMP}	-4.0	+4.0	mA	^{*4}
Total Maximum Clamp Current	$\Sigma I_{CLAMP} $	—	40	mA	^{*4}
"L" level maximum output current	I_{OL}	—	15	mA	^{*3}
"L" level average output current	I_{OLAV}	—	4	mA	^{*3}
"L" level maximum overall output current	ΣI_{OL}	—	100	mA	^{*3}
"L" level average overall output current	ΣI_{OLAV}	—	50	mA	^{*3}
"H" level maximum output current	I_{OH}	—	-15	mA	^{*3}
"H" level average output current	I_{OHAV}	—	-4	mA	^{*3}
"H" level maximum overall output current	ΣI_{OH}	—	-100	mA	^{*3}
"H" level average overall output current	ΣI_{OHAV}	—	-50	mA	^{*3}
Power consumption	P_D	—	240	mW	+105 °C < $T_A \leq +125$ °C, Normal operation : maximum frequency 16 MHz
		—	320	mW	-40 °C < $T_A \leq +105$ °C, Normal operation : maximum frequency 24 MHz
Operating temperature	T_A	-40	+105	°C	
		-40	+125	°C	^{*5}
Storage temperature	T_{STG}	-55	+150	°C	

(Continued)

(Continued)

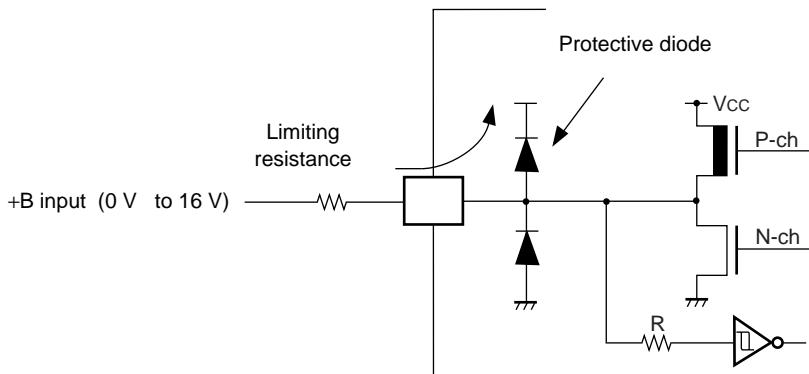

- *1: Set AV_{CC} and V_{CC} to the same voltage. Make sure that AV_{CC} does not exceed V_{CC} and that the voltage at the analog inputs does not exceed AV_{CC} when the power is switched on.
- *2: V_I and V_O should not exceed V_{CC} + 0.3 V. V_I should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supercedes the V_I rating.

*3: Applicable to pins: P00 to P07, P10 to P17, P20 to P25, P30 to P37, P40 to P45, P50 to P56, P60 to P67

- *4: • Applicable to pins: P00 to P07, P10 to P17, P20 to P25, P30 to P37, P40 to P45, P50 to P56 (for evaluation : P50 to P55) , P60 to P67

- Use within recommended operating conditions.
- Use at DC voltage (current)
- The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
- The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this may affect other devices.
- Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the power-on reset.
- Care must be taken not to leave the +B input pin open.
- Sample recommended circuits:

- Input/output equivalent circuits

*5 : If used exceeding T_A = +105 °C, be sure to contact Fujitsu for reliability limitations.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

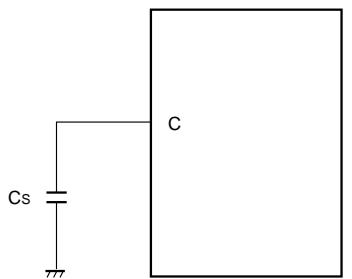

MB90350 Series

2. Recommended Conditions

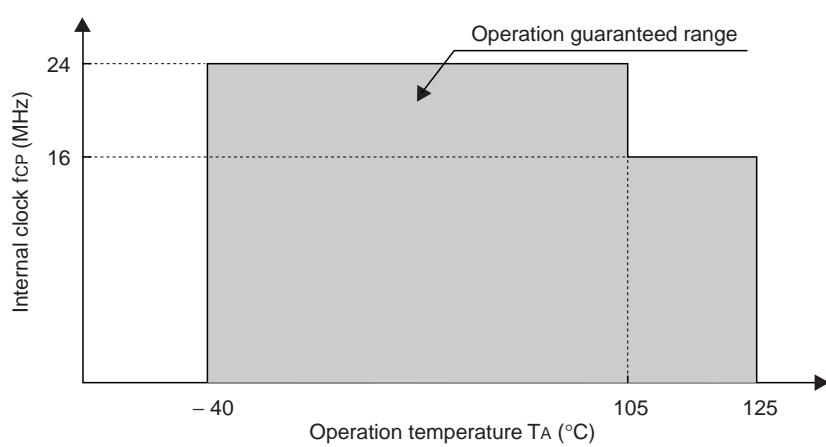

($V_{SS} = AV_{SS} = 0 \text{ V}$)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V_{CC} , AV_{CC}	4.0	5.0	5.5	V	Under normal operation
		3.5	5.0	5.5	V	Under normal operation, when not using the A/D converter and not Flash programming.
		4.5	5.0	5.5	V	When External bus is used.
		3.0	—	5.5	V	Maintains RAM data in stop mode
Smooth capacitor	C_s	0.1	—	1.0	μF	Use a ceramic capacitor or capacitor of better AC characteristics. Capacitor at the V_{CC} should be greater than this capacitor.
Operating temperature	T_A	-40	—	+105	$^{\circ}\text{C}$	
		-40	—	+125	$^{\circ}\text{C}$	*

* : If used exceeding $T_A = +105 \text{ }^{\circ}\text{C}$, be sure to contact Fujitsu for reliability limitations.

C Pin Connection Diagram

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

3. DC Characteristics

($T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 24\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)
 ($T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 16\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)

Parameter	Symbol	Pin	Condition	Value			Unit	Remarks
				Min	Typ	Max		
Input H voltage (At $V_{cc} = 5\text{ V} \pm 10\%$)	V_{IHS}	—	—	0.8 V_{cc}	—	$V_{cc} + 0.3$	V	Port inputs if CMOS hysteresis input levels are selected (except P12, P15, P44, P45, P50)

* : The power supply current is measured with an external clock.

4. AC Characteristics

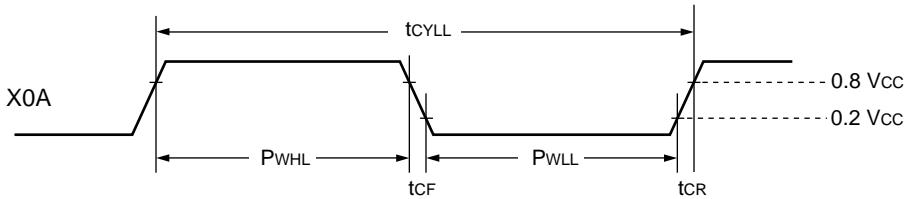

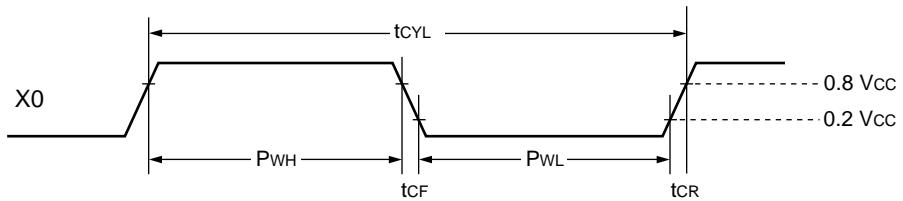

(1) Clock Timing

($T_A = -40^{\circ}\text{C}$ to $+105^{\circ}\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 24\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)

($T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 16\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)

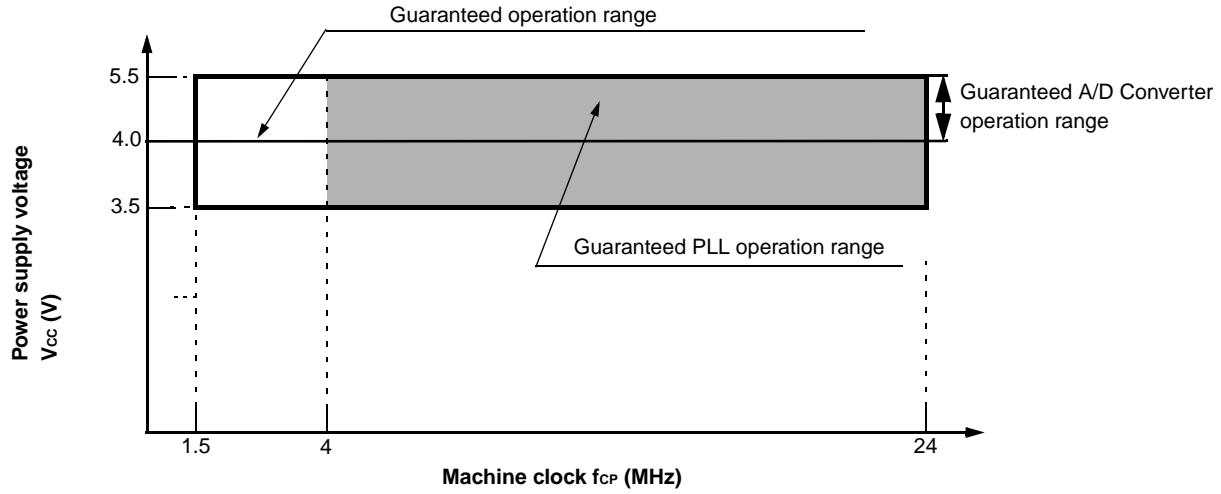

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	f_c	X0, X1	3	—	16	MHz	When using an oscillation circuit
		X0	3	—	24	MHz	When using an external clock*
	f_{cl}	X0A, X1A	—	32.768	100	kHz	
Clock cycle time	t_{CYL}	X0, X1	62.5	—	333	ns	When using an oscillation circuit
		X0	41.67	—	333	ns	When using an external clock
	t_{CYLL}	X0A, X1A	10	30.5	—	μs	
Input clock pulse width	P_{WH}, P_{WL}	X0	10	—	—	ns	Duty ratio is about 30% to 70%.
	P_{WHL}, P_{WLL}	X0A	5	15.2	—	μs	
Input clock rise and fall time	t_{CR}, t_{CF}	X0	—	—	5	ns	When using external clock
Internal operating clock frequency (machine clock)	f_{CP}	—	1.5	—	24	MHz	When using main clock at $T_A \leq +105^{\circ}\text{C}$
		—	—	—	16		When using main clock at $T_A \leq +125^{\circ}\text{C}$
	f_{CPL}	—	—	8.192	50	kHz	When using sub clock
Internal operating clock cycle time (machine clock)	t_{CP}	—	41.67	—	666	ns	When using main clock at $T_A \leq +105^{\circ}\text{C}$
		—	62.5	—	—		When using main clock at $T_A \leq +125^{\circ}\text{C}$
	t_{CPL}	—	20	122.1	—	μs	When using sub clock

* : When selecting the PLL clock, the range of clock frequency is limited. Use this product within range as mentioned in "Relation among external clock frequency and machine clock frequency".

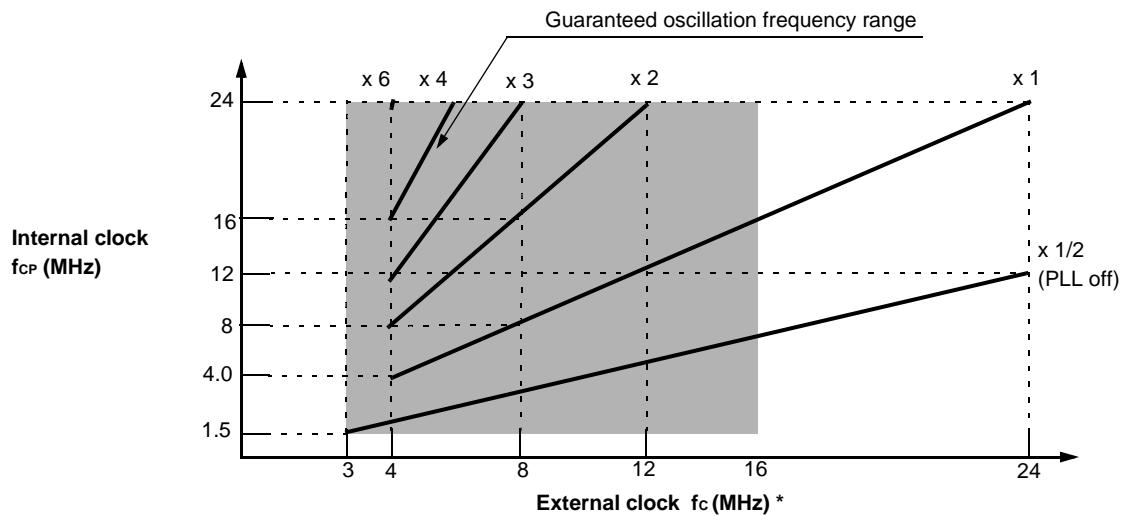

Clock Timing

MB90350 Series

Guaranteed operation range of MB90350 series

* : When using the oscillation circuit, the maximum oscillation clock frequency is 16 MHz

External clock frequency and Machine clock frequency

(2) Reset Standby Input

($T_A = -40^{\circ}\text{C}$ to $+105^{\circ}\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 24\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)

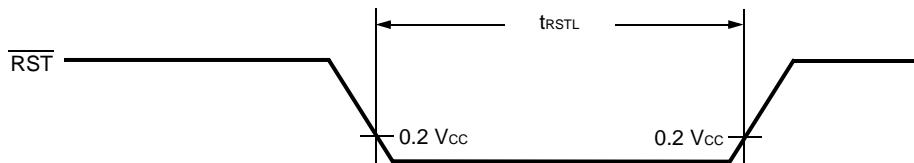

($T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $f_{cp} \leq 16\text{ MHz}$, $V_{ss} = AV_{ss} = 0\text{ V}$)

Parameter	Symbol	Pin	Value		Unit	Remarks
			Min	Max		
Reset input time	t _{RSTL}	$\overline{\text{RST}}$	500	—	ns	Under normal operation
			Oscillation time of oscillator* + 100 μs	—	μs	In Stop mode, Sub Clock mode, Sub Sleep mode and Watch mode
			100	—	μs	In Main timer mode and PLL timer mode

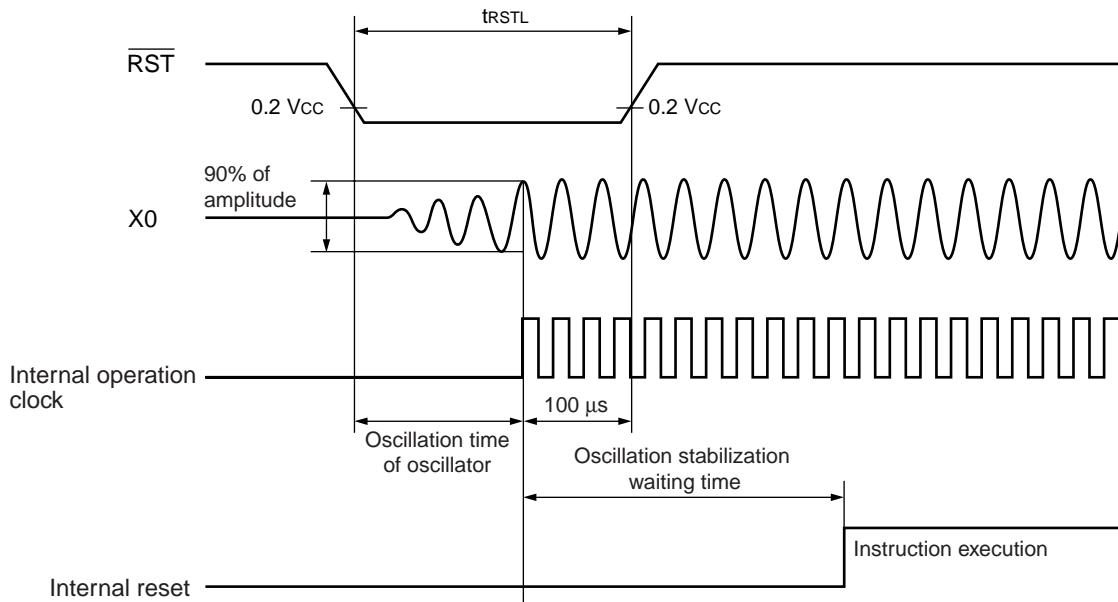

* : Oscillation time of oscillator is the time that the amplitude reaches 90%.

In the crystal oscillator, the oscillation time is between several ms to tens of ms. In FAR / ceramic oscillators, the oscillation time is between hundreds of μs to several ms. With an external clock, the oscillation time is 0 ms.

Under normal operation:

In Stop mode, Sub Clock mode, Sub Sleep mode, Watch mode:

MB90350 Series

(3) Power On Reset

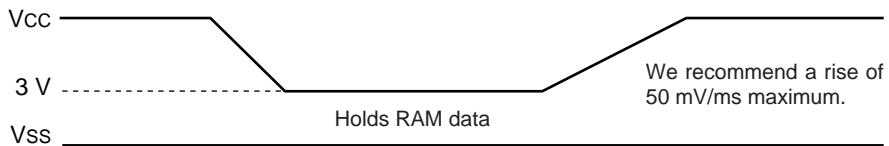

($T_A = -40^{\circ}\text{C}$ to $+105^{\circ}\text{C}$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $f_{CP} \leq 24\text{ MHz}$, $V_{SS} = AV_{SS} = 0\text{ V}$)

($T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $f_{CP} \leq 16\text{ MHz}$, $V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Power on rise time	t_R	V_{CC}	—	0.05	30	ms	
Power off time	t_{OFF}	V_{CC}		1	—	ms	Due to repetitive operation

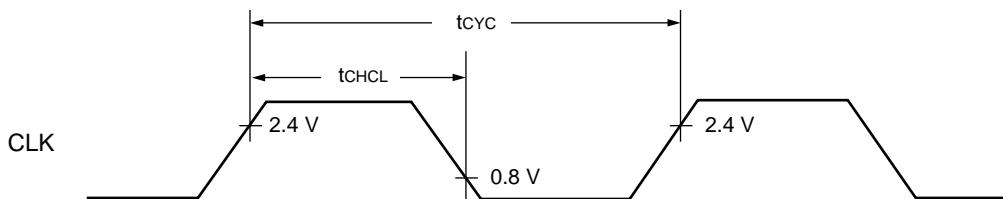

If you change the power supply voltage too rapidly, a power on reset may occur. We recommend that you startup smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

(4) Clock Output Timing

($T_A = -40^{\circ}\text{C}$ to $+105^{\circ}\text{C}$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $V_{SS} = 0.0\text{ V}$, $f_{CP} \leq 24\text{ MHz}$)

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Cycle time	t_{CYC}	CLK	—	62.5	—	ns	$f_{CP} = 16\text{ MHz}$
				41.76	—	ns	$f_{CP} = 24\text{ MHz}$
$\text{CLK} \uparrow \rightarrow \text{CLK} \downarrow$	t_{CHCL}	CLK	—	20	—	ns	$f_{CP} = 16\text{ MHz}$
				13	—	ns	$f_{CP} = 24\text{ MHz}$

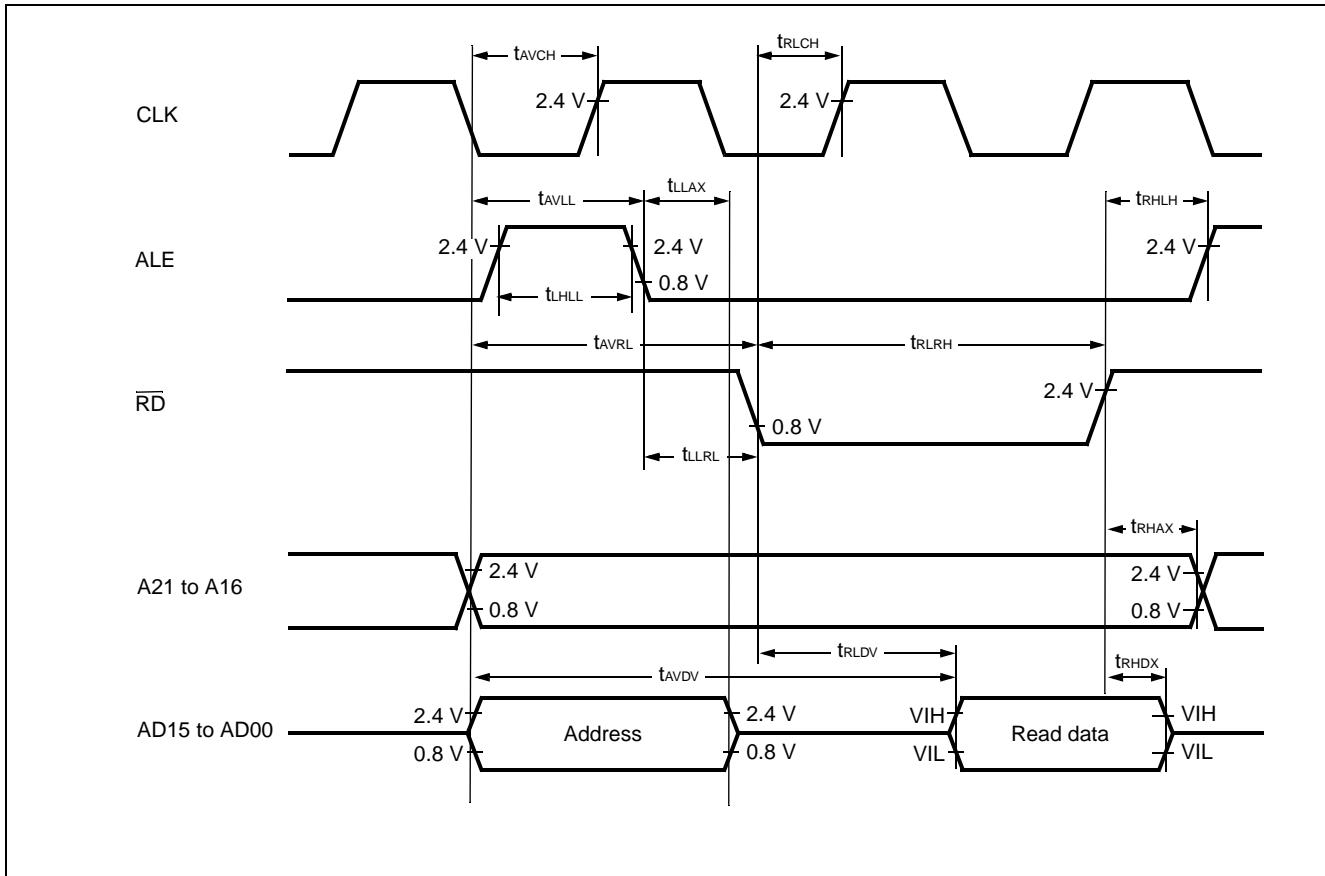

(5) Bus Timing (Read)

($T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$, $V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = 0.0 \text{ V}$, $f_{CP} \leq 24 \text{ MHz}$)

Compare time	—	—	1.0	—	16,500	μs	$4.5\text{ V} \leq \text{AV}_{\text{CC}} \leq 5.5\text{ V}$
			2.0				$4.0\text{ V} \leq \text{AV}_{\text{CC}} < 4.5\text{ V}$
Sampling time	—	—	0.5	—	∞	μs	$4.5\text{ V} \leq \text{AV}_{\text{CC}} \leq 5.5\text{ V}$
			1.2				$4.0\text{ V} \leq \text{AV}_{\text{CC}} < 4.5\text{ V}$
Analog port input current	I_{AIN}	AN0 to AN14	-0.3	—	+0.3	μA	
Analog input voltage range	V_{AIN}	AN0 to AN14	AV_{SS}	—	AVRH	V	
Reference voltage range	—	AVRH	$\text{AV}_{\text{SS}} + 2.7$	—	AV_{CC}	V	
Power supply current	I_A	AV_{CC}	—	3.5	7.5	mA	
	I_{AH}	AV_{CC}	—	—	5	μA	*
Reference voltage current	I_R	AVRH	—	600	900	μA	
	I_{RH}	AVRH	—	—	5	μA	*
Offset between input channels	—	AN0 to AN14	—	—	4	LSB	

* : IF A/D convertor is not operating, a current when CPU is stopped is applicable ($\text{V}_{\text{CC}} = \text{AV}_{\text{CC}} = \text{AVRH} = 5.0\text{ V}$) .

Note : The accuracy gets worse as $|\text{AVRH} - \text{AV}_{\text{SS}}|$ becomes smaller.

6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Non linearity error : Deviation between a line across zero-transition line ("00 0000 0000" \leftrightarrow "00 0000 0001") and full-scale transition line ("11 1111 1110" \leftrightarrow "11 1111 1111") and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between an actual value and an ideal value. A total error includes zero transition error, full-scale transition error, and linear error.
- Zero reading voltage : Input voltage which results in the minimum conversion value.
- Full scale reading voltage : Input voltage which results in the maximum conversion value.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB} = (\text{Ideal value}) \frac{\text{AVRH} - \text{AVss}}{1024} \text{ [V]}$$

$$V_{OT} \text{ (Ideal value)} = \text{AVss} + 0.5 \text{ LSB} \text{ [V]}$$

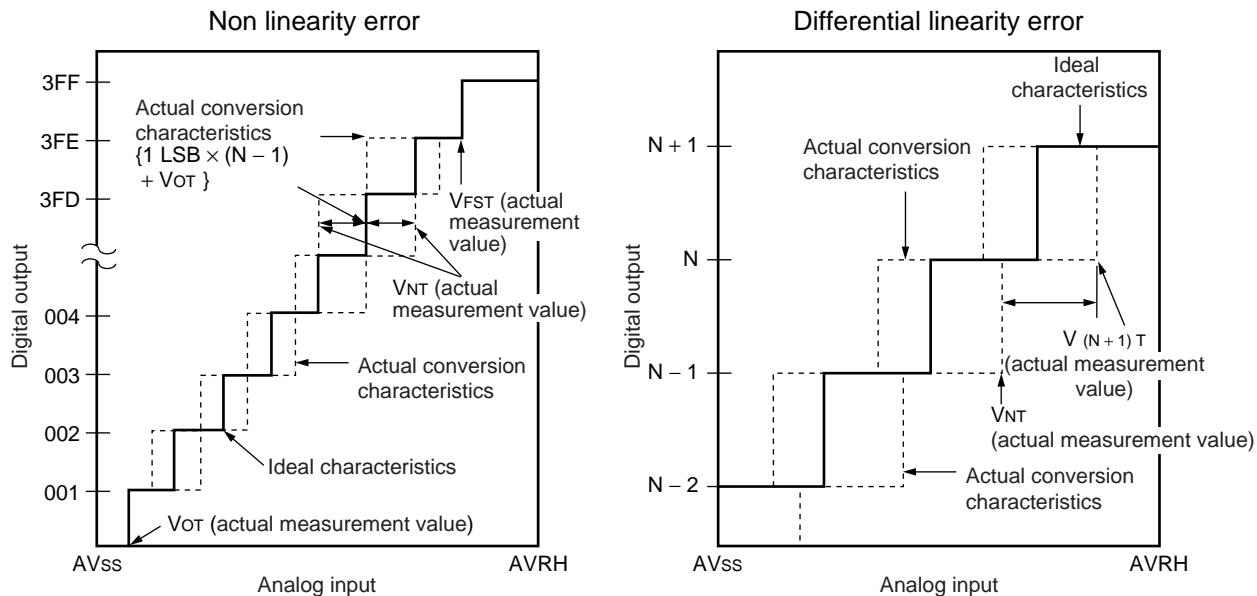

$$V_{FST} \text{ (Ideal value)} = \text{AVRH} - 1.5 \text{ LSB} \text{ [V]}$$

V_{NT} : A voltage at which digital output transitions from $(N - 1)$ to N .

(Continued)

MB90350 Series

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB \text{ [LSB]}}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

V_{OT} : Voltage at which digital output transits from "000_H" to "001_H."

V_{FST} : Voltage at which digital output transits from "3FE_H" to "3FF_H."

7. Notes on A/D Converter Section

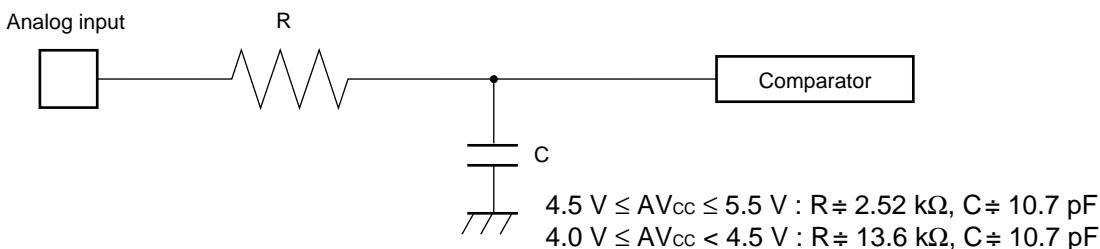

Use the device with external circuits of the following output impedance for analog inputs :

Recommended output impedance of external circuits are : Approx. $1.5 \text{ k}\Omega$ or lower ($4.0 \text{ V} \leq AV_{cc} \leq 5.5 \text{ V}$, sampling period $\leq 0.5 \mu\text{s}$)

If an external capacitor is used, in consideration of the effect by tap capacitance caused by external capacitors and on-chip capacitors, capacitance of the external one is recommended to be several thousand times as high as internal capacitor.

If output impedance of an external circuit is too high, a sampling period for an analog voltage may be insufficient.

- Analog input circuit model

Note : Use the values in the figure only as a guideline.

8. Flash Memory Program/Erase Characteristics

Parameter	Conditions	Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time	$T_A = +25^\circ\text{C}$ $V_{cc} = 5.0 \text{ V}$	—	1	15	s	Excludes programming prior to erasure
Chip erase time		—	9	—	s	Excludes programming prior to erasure
Word (16 bit width) programming time		—	16	3,600	μs	Except for the overhead time of the system
Program/Erase cycle	—	10,000	—	—	cycle	
Flash Data Retention Time	Average $T_A = +85^\circ\text{C}$	20	—	—	Years	*

* : This value comes from the technology qualification.

(Using Arrhenius equation to translate high temperature measurements into normalized value at $+85^\circ\text{C}$)

■ ORDERING INFORMATION

Part number	Package	Remarks
MB90F352PFM	64-pin Plastic LQFP (FPT-64P-M09)	
MB90352SPFM	64-pin Plastic LQFP (FPT-64P-M09)	
MB90V340A-101	299-pin Ceramic PGA (PGA-299C-A01)	
MB90V340A-102		For evaluation

■ PACKAGE DIMENSIONS

64-pin Plastic LQFP
(FPT-64P-M09)

Note 1) * : These dimensions do not include resin protrusion.
 Note 2) Pins width and pins thickness including plating thickness.
 Note 3) Pins width do not include tie bar cutting remainder.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
