

MC14598B

8-Bit Bus-Compatible Latches

The MC14598B is an 8-bit latch addressed with an external binary address. The 8 latch-outputs are high drive, three-state and bus line compatible. The drive capability allows direct applications with MPU systems such as the Motorola 6800 family.

The latches of the MC14598B are accessed via the Address pins, A0, A1, and A2.

All 8 outputs from the latches are available in parallel when $\overline{\text{Enable}}$ is in the low state. Data is entered into a selected latch from the Data pin when the Strobe is high. Master reset is available on both parts.

Features

- Serial Data Input
- Three-State Bus Compatible Parallel Outputs
- Three-State Control Pin ($\overline{\text{Enable}}$) TTL Compatible Input
- Open Drain Full Flag (Multiple Latch Wire-O Ring)

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{in} and V_{out} should be constrained to the range $V_{SS} \leq (V_{in} \text{ or } V_{out}) \leq V_{DD}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either V_{SS} or V_{DD}). Unused outputs must be left open.
