

ECOUSB™ Series USB 2.0 HUB CONTROLLER

The μ PD720114 is a USB 2.0 hub device that complies with the Universal Serial Bus (USB) Specification Revision 2.0 and works up to 480 Mbps. USB 2.0 compliant transceivers are integrated for upstream and all downstream ports. The μ PD720114 works backward compatible either when any one of the downstream ports is connected to a USB 1.1 compliant device, or when the upstream port is connected to a USB 1.1 compliant host.

Detailed function descriptions are provided in the following user's manual. Be sure to read the manual before designing.
 μ PD720114 User's Manual: S17463E

FEATURES

- Compliant with Universal Serial Bus Specification Revision 2.0 (Data Rate 1.5/12/480 Mbps)
- High-speed or full-speed packet protocol sequencer for Endpoint 0/1
- 4 (Max.) downstream facing ports
- All downstream facing ports can handle high-speed (480 Mbps), full-speed (12 Mbps), and low-speed (1.5 Mbps) transaction.
- Supports split transaction to handle full-speed and low-speed transaction on downstream facing ports when Hub controller is working in high-speed mode.
- One Transaction Translator per Hub and supports four non-periodic buffers
- Supports self-powered and bus-powered mode
- Supports individual or global over-current detection and individual or ganged power control
- Supports downstream port status with LED
- Supports non-removable devices by I/O pin configuration
- Support Energy Star for PC peripheral system
- On chip Rpu, Rpd resistors and regulator (for core logic)
- Low power consumption
- Use 30 MHz X'tal
- 3.3 V power supply

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

ORDERING INFORMATION

| Part Number | Package | Remark |
|-------------------|--|-------------------|
| μPD720114GA-9EU-A | 48-pin plastic TQFP (Fine pitch) (7 × 7) | Lead-free product |

BLOCK DIAGRAM

| | |
|---------------------|--|
| APLL | : Generates all clocks of Hub. |
| ALL_TT | : Translates the high-speed transactions (split transactions) for full/low-speed device to full/low-speed transactions. ALL_TT buffers the data transfer from either upstream or downstream direction. For OUT transaction, ALL_TT buffers data from upstream port and sends it out to the downstream facing ports after speed conversion from high-speed to full/low-speed. For IN transaction, ALL_TT buffers data from downstream ports and sends it out to the upstream facing ports after speed conversion from full/low-speed to high-speed. |
| CDR | : Data & clock recovery circuit |
| DPC | : Downstream Port Controller handles Port Reset, Enable, Disable, Suspend and Resume |
| DP(n)_PHY | : Downstream transceiver supports high-speed (480 Mbps), full-speed (12 Mbps), and low-speed (1.5 Mbps) transaction |
| EP0 | : Endpoint 0 controller |
| EP1 | : Endpoint 1 controller |
| F_TIM (Frame Timer) | : Manages hub's synchronization by using micro-SOF which is received at upstream port, and generates SOF packet when full/low-speed device is attached to downstream facing port. |
| FS_REP | : Full/low-speed repeater is enabled when the μ PD720114 are worked at full-speed mode |
| OSB | : Oscillator Block |
| 2.5V REG | : On chip 2.5V regulator |
| SERDES | : Serializer and Deserializer |
| SIE_2H | : Serial Interface Engine (SIE) controls USB2.0 and 1.1 protocol sequencer. |
| UP_PHY | : Upstream Transceiver supports high-speed (480 Mbps), full-speed (12 Mbps) transaction |
| UPC | : Upstream Port Controller handles Suspend and Resume |

PIN CONFIGURATION (TOP VIEW)

- 48-pin plastic TQFP (Fine pitch) (7 × 7)

μPD720114GA-9EU-A

| Pin No. | Pin Name | Pin No. | Pin Name | Pin No. | Pin Name | Pin No. | Pin Name |
|---------|----------------------|---------|---------------------|---------|-------------------|---------|----------------------|
| 1 | V _{DD25OUT} | 13 | BUS_B | 25 | DM1 | 37 | SYSRSTB |
| 2 | V _{SSREG} | 14 | TEST | 26 | DP1 | 38 | PPB4 |
| 3 | LED4 | 15 | RREF | 27 | V _{SS} | 39 | CSB4 |
| 4 | LED3 | 26 | AV _{SS(R)} | 28 | DM2 | 40 | PPB3 |
| 5 | LED2 | 17 | AV _{DD} | 29 | DP2 | 41 | CSB3 |
| 6 | LED1 | 18 | AV _{SS} | 30 | V _{DD33} | 42 | V _{SS} |
| 7 | GREEN | 19 | AV _{DD} | 31 | DM3 | 43 | PPB2 |
| 8 | AMBER | 20 | V _{DD33} | 32 | DP3 | 44 | CSB2 |
| 9 | V _{DD33} | 21 | DMU | 33 | V _{DD25} | 45 | PPB1 |
| 10 | X1 | 22 | DPU | 34 | DM4 | 46 | CSB1 |
| 11 | X2 | 23 | V _{SS} | 35 | DP4 | 47 | VBUSM |
| 12 | V _{DD25} | 24 | V _{DD25} | 36 | V _{SS} | 48 | V _{DD33REG} |

Remark AV_{SS(R)} should be used to connect RREF through 1 % precision reference resistor of 2.43 k Ω .

1. PIN INFORMATION

| Pin Name | I/O | Buffer Type | Active Level | Function |
|----------------------|-------|----------------------------|--------------|--|
| X1 | I | 2.5 V input | | 30MHz Crystal oscillator in |
| X2 | O | 2.5 V output | | 30MHz Crystal oscillator out |
| SYSRSTB | I | 3.3 V Schmitt input | Low | Asynchronous chip hardware reset |
| DP(4:1) | I/O | USB D+ signal I/O | | USB's downstream facing port D+ signal |
| DM(4:1) | I/O | USB D- signal I/O | | USB's downstream facing port D- signal |
| DPU | I/O | USB D+ signal I/O | | USB's upstream facing port D+ signal |
| DMU | I/O | USB D- signal I/O | | USB's upstream facing port D- signal |
| BUS_B | I | 3.3 V Schmitt input | | Power mode select |
| RREF | A (O) | Analog | | Reference resistor connection |
| CSB1 | I | 5 V tolerant Schmitt input | Low | Port's over-current status input. |
| CSB(4:2) | I | 3.3 V Schmitt input | Low | Port's over-current status input |
| PPB(4:1) | I/O | 3.3 V output / input | Low | Port's power supply control output or hub configuration input |
| VBUSM | I | 5 V tolerant Schmitt input | | Upstream V _{BUS} monitor |
| AMBER | I/O | 3.3V output / input | | Amber colored LED control output or port indicator select |
| GREEN | O | 3.3V output | | Green colored LED control output or port indicator select |
| LED(4:1) | I/O | 3.3V output / input | Low | LED indicator output show downstream port status or Removable/Non-removable select |
| TEST | I | 3.3 V Schmitt input | | Test signal |
| V _{DD25OUT} | | | | On chip 2.5 V regulator output, it must have a 4.7μF (or greater) capacitor to V _{SSREG} |
| V _{DD33} | | | | 3.3 V V _{DD} |
| V _{DD33REG} | | | | 3.3 V V _{DD} for on chip 2.5V regulator input, it must have a 4.7μF (or greater) capacitor to V _{SSREG} |
| V _{DD25} | | | | 2.5 V V _{DD} |
| AV _{DD} | | | | 2.5 V V _{DD} for analog circuit |
| V _{SS} | | | | V _{SS} |
| V _{SSREG} | | | | On chip 2.5 V regulator V _{SS} |
| AV _{SS} | | | | V _{SS} for analog circuit |
| AV _{SS} (R) | | | | V _{SS} for reference resistor, Connect to AV _{SS} . |

Remark "5 V tolerant" means that the buffer is 3 V buffer with 5 V tolerant circuit.

2. ELECTRICAL SPECIFICATIONS

2.1 Buffer List

- 2.5 V Oscillator interface
X1, X2
- 5 V tolerant Schmitt input buffer
CSB1, VBUSM
- 3.3 V Schmitt input buffer
CSB(4:2), BUS_B, SYSRSTB, TEST
- 3.3 V $I_{OL} = 12$ mA output buffer
GREEN
- 3.3 V input and 3.3 V $I_{OL} = 3$ mA output buffer
PPB(4:1), LED(4:1)
- 3.3 V input and $I_{OL} = 12$ mA output buffer
AMBER
- USB2.0 interface
DPU, DMU, DP(4:1), DM(4:1), RREF

Above, "5 V" refers to a 3 V input buffer that is 5 V tolerant (has 5 V maximum input voltage). Therefore, it is possible to have a 5 V connection for an external bus.

2.2 Terminology

Terms Used in Absolute Maximum Ratings

| Parameter | Symbol | Meaning |
|-----------------------|------------|---|
| Power supply voltage | V_{DD33} | Indicates voltage range within which damage or reduced reliability will not result when power is applied to a V_{DD} pin. |
| Input voltage | V_I | Indicates voltage range within which damage or reduced reliability will not result when power is applied to an input pin. |
| Output voltage | V_O | Indicates voltage range within which damage or reduced reliability will not result when power is applied to an output pin. |
| Output current | I_O | Indicates absolute tolerance values for DC current to prevent damage or reduced reliability when current flows out of or into an output pin. |
| Operating temperature | T_A | Indicates the ambient temperature range for normal logic operations. |
| Storage temperature | T_{stg} | Indicates the element temperature range within which damage or reduced reliability will not result while no voltage or current are applied to the device. |

Terms Used in Recommended Operating Range

| Parameter | Symbol | Meaning |
|--------------------------|------------|---|
| Power supply voltage | V_{DD33} | Indicates the voltage range for normal logic operations to occur when $V_{SS} = 0$ V. |
| High-level input voltage | V_{IH} | Indicates the voltage, applied to the input pins of the device, which indicates the high level state for normal operation of the input buffer. * If a voltage that is equal to or greater than the "MIN." value is applied, the input voltage is guaranteed as high level voltage. |
| Low-level input voltage | V_{IL} | Indicates the voltage, applied to the input pins of the device, which indicates the low level state for normal operation of the input buffer. * If a voltage that is equal to or less than the "MAX." value is applied, the input voltage is guaranteed as low level voltage. |
| Hysteresis voltage | V_H | Indicates the differential between the positive trigger voltage and the negative trigger voltage. |
| Input rise time | t_{ri} | Indicates allowable input rise time to input signal transition time from $0.1 \times V_{DD}$ to $0.9 \times V_{DD}$. |
| Input fall time | t_{fi} | Indicates allowable input fall time to input signal transition time from $0.9 \times V_{DD}$ to $0.1 \times V_{DD}$. |

Terms Used in DC Characteristics

| Parameter | Symbol | Meaning |
|----------------------------------|----------|--|
| Off-state output leakage current | I_{OZ} | Indicates the current that flows into a 3-state output pin when it is in a high-impedance state and a voltage is applied to the pin. |
| Output short circuit current | I_{OS} | Indicates the current that flows from an output pin when it is shorted to GND pins. |
| Input leakage current | I_I | Indicates the current that flows into an input pin when a voltage is applied to the pin. |
| Low-level output current | I_{OL} | Indicates the current that flows to the output pins when the rated low-level output voltage is being applied. |
| High-level output current | I_{OH} | Indicates the current that can flow out of an output pin in the high-level state without reducing the output voltage below the specified V_{OH} . (A negative current indicates current flowing out of the pin.) |

2.3 Electrical Specifications

Absolute Maximum Ratings

| Parameter | Symbol | Condition | Rating | Unit |
|----------------------------|------------|---|----------------|----------------|
| Power supply voltage | V_{DD33} | | -0.5 to +4.6 | V |
| Input/output voltage | V_I/V_O | | | |
| 3.3 V input/output voltage | | $3.0\text{ V} \leq V_{DD33} \leq 3.6\text{ V}$ $V_I/V_O < V_{DD33} + 1.0\text{ V}$ | -0.5 to +4.6 | V |
| 5 V input/out voltage | | $3.0\text{ V} \leq V_{DD33} \leq 3.6\text{ V}$ $V_I/V_O < V_{DD33} + 3.0\text{ V}$ | -0.5 to +6.6 | V |
| Output current | I_O | $I_{OL} = 3\text{ mA}$ $I_{OL} = 6\text{ mA}$ $I_{OL} = 12\text{ mA}$ | 10 20 40 | mA mA mA |
| Operating temperature | T_A | | 0 to +70 | °C |
| Storage temperature | T_{stg} | | -65 to +150 | °C |

Caution Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameters. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

The ratings and conditions indicated for DC characteristics and AC characteristics represent the quality assurance range during normal operation.

Recommended Operating Ranges

| Parameter | Symbol | Condition | MIN. | TYP. | MAX. | Unit |
|--------------------------------|-------------------|----------------------------------|------|------|-------------------|------|
| Operating voltage | V _{DD33} | 3.3 V for V _{DD33} pins | 3.14 | 3.30 | 3.46 | V |
| High-level input voltage | V _{IH} | | | | | |
| 3.3 V High-level input voltage | | | 2.0 | | V _{DD33} | V |
| 5.0 V High-level input voltage | | | 2.0 | | 5.5 | V |
| Low-level input voltage | V _{IL} | | | | | |
| 3.3 V Low-level input voltage | | | 0 | | 0.8 | V |
| 5.0 V Low-level input voltage | | | 0 | | 0.8 | V |
| Hysteresis voltage | V _H | | | | | |
| 5 V Hysteresis voltage | | | 0.3 | | 1.5 | V |
| 3.3 V Hysteresis voltage | | | 0.2 | | 1.0 | V |
| Input rise time for SYSRSTB | t _{rst} | | | | 10 | ms |
| Input rise time | t _{ri} | | | | | |
| Normal buffer | | | 0 | | 200 | ns |
| Schmitt buffer | | | 0 | | 10 | ms |
| Input fall time | t _{fi} | | | | | |
| Normal buffer | | | 0 | | 200 | ns |
| Schmitt buffer | | | 0 | | 10 | ms |

DC Characteristics

| Parameter | Symbol | Condition | MIN. | MAX. | Unit |
|----------------------------------|--------------------------|---|------|----------|---------|
| Off-state output leakage current | I_{OZ} | $V_O = V_{DD33}, V_{DD25} \text{ or } V_{SS}$ | | ± 10 | μA |
| Output short circuit current | I_{OS} ^{Note} | | | -250 | mA |
| Low-level output current | I_{OL} | | | | |
| 3.3 V low-level output current | | $V_{OL} = 0.4 \text{ V}$ | 3 | | mA |
| 3.3 V low-level output current | | $V_{OL} = 0.4 \text{ V}$ | 6 | | mA |
| 5.0 V low-level output current | | $V_{OL} = 0.4 \text{ V}$ | 12 | | mA |
| High-level output current | I_{OH} | | | | |
| 3.3 V high-level output current | | $V_{OH} = 2.4 \text{ V}$ | -3 | | mA |
| 3.3 V high-level output current | | $V_{OH} = 2.4 \text{ V}$ | -6 | | mA |
| 5.0 V high-level output current | | $V_{OH} = 2.4 \text{ V}$ | -2 | | mA |
| Input leakage current | I_I | | | | |
| 3.3 V buffer | | $V_I = V_{DD} \text{ or } V_{SS}$ | | ± 10 | μA |
| 5.0 V buffer | | $V_I = V_{DD} \text{ or } V_{SS}$ | | ± 10 | μA |

Note The output short circuit time is measured at one second or less and is tested with only one pin on the LSI.

USB Interface Block

| Parameter | Symbol | Conditions | MIN | MAX | Unit |
|--|---------------------|-------------------------------------|-------|------|------|
| Output pin impedance | Z _{HSDRV} | Includes R _s resistor | 40.5 | 49.5 | Ω |
| Termination voltage for upstream facing port pullup (full-speed) | V _{TERM} | | 3.0 | 3.6 | V |
| Input Levels for Low-/full-speed: | | | | | |
| High-level input voltage (drive) | V _{IH} | | 2.0 | | V |
| High-level input voltage (floating) | V _{IHZ} | | 2.7 | 3.6 | V |
| Low-level input voltage | V _{IL} | | | 0.8 | V |
| Differential input sensitivity | V _{DI} | (D+) - (D-) | 0.2 | | V |
| Differential common mode range | V _{CM} | Includes V _{DI} range | 0.8 | 2.5 | V |
| Output Levels for Low-/full-speed: | | | | | |
| High-level output voltage | V _{OH} | R _L of 14.25 kΩ to GND | 2.8 | 3.6 | V |
| Low-level output voltage | V _{OL} | R _L of 1.425 kΩ to 3.6 V | 0.0 | 0.3 | V |
| SE1 | V _{OSE1} | | 0.8 | | V |
| Output signal crossover point voltage | V _{CRS} | | 1.3 | 2.0 | V |
| Input Levels for High-speed: | | | | | |
| High-speed squelch detection threshold (differential signal) | V _{HSSQ} | | 100 | 150 | mV |
| High-speed disconnect detection threshold (differential signal) | V _{HSDSC} | | 525 | 625 | mV |
| High-speed data signaling common mode voltage range | V _{HSCM} | | -50 | +500 | mV |
| High-speed differential input signaling levels | See Figure 2-4. | | | | |
| Output Levels for High-speed: | | | | | |
| High-speed idle state | V _{HSOI} | | -10.0 | +10 | mV |
| High-speed data signaling high | V _{HSOH} | | 360 | 440 | mV |
| High-speed data signaling low | V _{H SOL} | | -10.0 | +10 | mV |
| Chirp J level (different signal) | V _{CHIRPJ} | | 700 | 1100 | mV |
| Chirp K level (different signal) | V _{CHIRPK} | | -900 | -500 | mV |

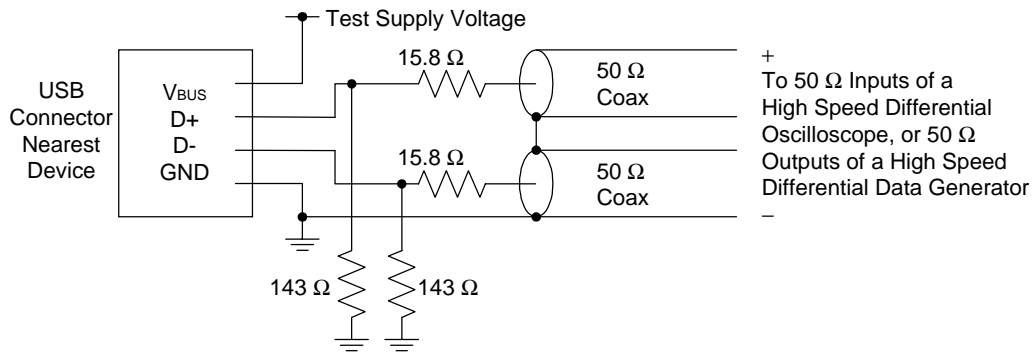

Figure 2-5. Receiver Measurement Fixtures

Power Consumption

| Parameter | Symbol | Condition | TYP. | Unit |
|--|--|---|-----------|----------|
| Power Consumption | P _{W-0} | The power consumption under the state without suspend. All the ports do not connect to any function. | | |
| | | Hub controller is operating at full-speed mode. Hub controller is operating at high-speed mode. | 31 86 | mA mA |
| | P _{W-2} | The power consumption under the state without suspend. The number of active ports is 2. | | |
| | | Hub controller is operating at full-speed mode. Hub controller is operating at high-speed mode. | 36 120 | mA mA |
| | P _{W-3} | The power consumption under the state without suspend. The number of active ports is 3. | | |
| Hub controller is operating at full-speed mode. Hub controller is operating at high-speed mode. | | 38 134 | mA mA | |
| P _{W-4} | The power consumption under the state without suspend. The number of active ports is 4. | | | |
| | Hub controller is operating at full-speed mode. Hub controller is operating at high-speed mode. | 41 149 | mA mA | |
| P _{W-s} | The power consumption under suspend state. | | 220 | μA |

Remark The power consumption depends on the number of ports available and actively operating. Ports available but inactive or unplugged do not add to the power consumption. If the μPD720114 is locally powered and the upstream facing port is unplugged, μPD720114 goes into suspend state and downstream facing port Vbus goes down.

System Clock Ratings

| Parameter | Symbol | Condition | MIN. | TYP. | MAX. | Unit |
|------------------|-------------------|-----------|----------|------|----------|------|
| Clock frequency | f _{CLK} | X'tal | -500 ppm | 30 | +500 ppm | MHz |
| Clock Duty cycle | t _{DUTY} | | 40 | 50 | 60 | % |

- Remarks**
1. Recommended accuracy of clock frequency is ± 100 ppm.
 2. Required accuracy of X'tal is including initial frequency accuracy, the spread of X'tal capacitor loading, supply voltage, temperature, and aging, etc.

AC Characteristics (V_{DD} = 3.14 to 3.46 V, T_A = 0 to +70°C)

System Reset Timing

| Parameter | Symbol | Conditions | MIN. | MAX. | Unit |
|--------------------------------|------------------|------------|------|------|------|
| Reset active time (Figure 2-6) | t _{rst} | | 5 | | μs |

Figure 2-6. System Reset Timing

Over-current Response Timing

| Parameter | Symbol | Condition | MIN. | TYP. | MAX. | Unit |
|--|----------|-----------|------|------|------|------|
| Over-current response time from CSB low to PPB high (Figure 2-7) | t_{oc} | | 4 | | 5 | ms |

Figure 2-7. Over-current Response Timing

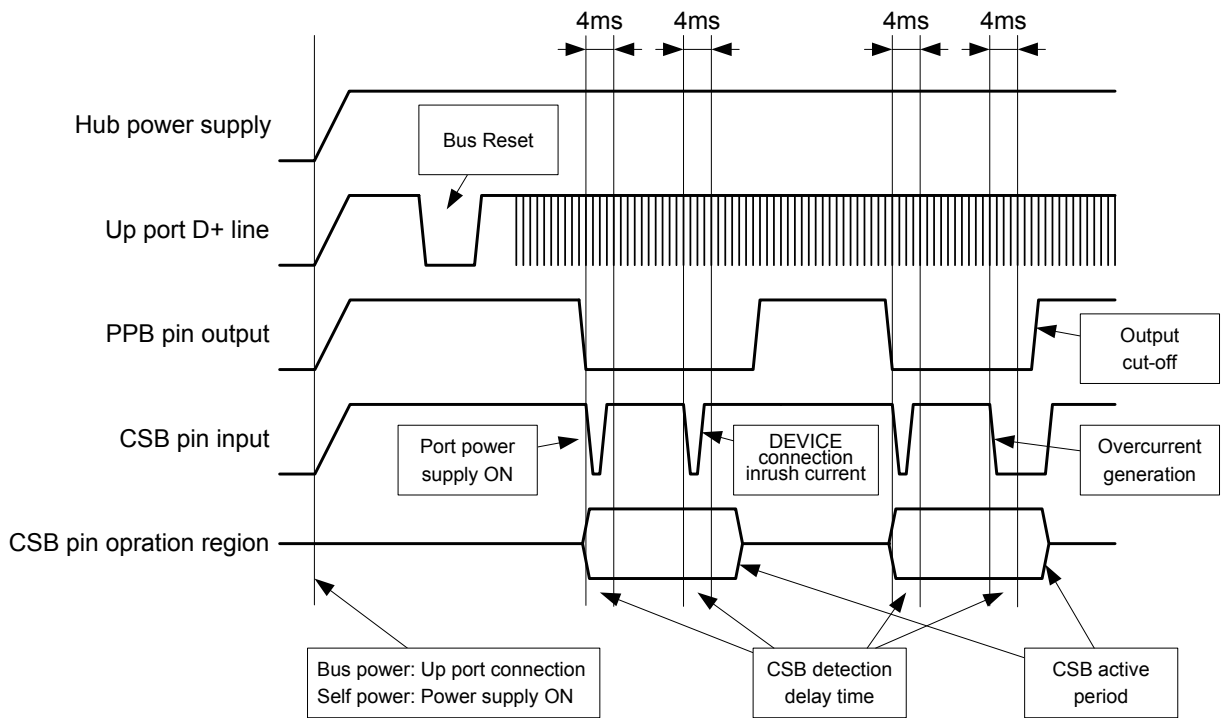

Figure 2-8. CSB/PPB Timing

Remark The active period of the CSB pin is in effect only when the PPB pin is ON.
 There is a delay time of approximately 4 ms duration at the CSB pin.

| Fall time (90% to 10%) | t _{HSF} | | 500 | | ps |
| Driver waveform | See Figure 2-9. | | | | |
| High-speed data rate | t _{HSDRAT} | | 479.760 | 480.240 | Mbps |
| Microframe interval | t _{HSFRAM} | | 124.9375 | 125.0625 | μs |
| Consecutive microframe interval difference | t _{HSRFI} | | | 4 high-speed | Bit times |
| Data source jitter | See Figure 2-9. | | | | |
| Receiver jitter tolerance | See Figure 2-4. | | | | |
| Hub data delay (without cable) | t _{HSHDD} | | | 36 high-speed+4 ns | Bit times |
| Hub data jitter | See Figure 2-4, Figure 2-9. | | | | |
| Hub delay variation range | t _{HSHDV} | | | 5 high-speed | Bit times |

Note Excluding the first transition from the Idle state.

(3/4)

| Parameter | Symbol | Conditions | MIN. | MAX. | Unit |
|---|-----------|--|------|-------|--------------|
| Hub Event Timings | | | | | |
| Time to detect a downstream facing port connect event (Figure 2-17): Awake hub Suspended hub | tDCNN | | 2.5 | 2000 | μs |
| | | | 2.5 | 12000 | μs |
| Time to detect a disconnect event at a hub's downstream facing port (Figure 2-16) | tDDIS | | 2.0 | 2.5 | μs |
| Duration of driving resume to a downstream port (only from a controlling hub) | tDRSMDN | | 20 | | ms |
| Time from detecting downstream resume to rebroadcast | tURSM | | | 1.0 | ms |
| Duration of driving reset to a downstream facing port (Figure 2-18) | tDRST | Only for a SetPortFeature (PORT_RESET) request | 10 | 20 | ms |
| Time to detect a long K from upstream | tURLK | | 2.5 | 100 | μs |
| Time to detect a long SE0 from upstream | tURLSE0 | | 2.5 | 10000 | μs |
| Duration of repeating SE0 upstream (for low-/full-speed repeater) | tURPSE0 | | | 23 | FS Bit times |
| Inter-packet delay (for high-speed) of packets traveling in same direction | tHSIPDSD | | 88 | | Bit times |
| Inter-packet delay (for high-speed) of packets traveling in opposite direction | tHSIPDOD | | 8 | | Bit times |
| Inter-packet delay for device/root hub response with detachable cable for high-speed | tHSRSPDP1 | | | 192 | Bit times |
| Time of which a Chirp J or Chirp K must be continuously detected (filtered) by hub or device during Reset handshake | tFILT | | 2.5 | | μs |
| Time after end of device Chirp K by which hub must start driving first Chirp K in the hub's chirp sequence | tWTDCH | | | 100 | μs |
| Time for which each individual Chirp J or Chirp K in the chirp sequence is driven downstream by hub during reset | tDCHBIT | | 40 | 60 | μs |
| Time before end of reset by which a hub must end its downstream chirp sequence | tDCHSE0 | | 100 | 500 | μs |
| Time from internal power good to device pulling D+ beyond V _{IHZ} (Figure 2-18) | tSIGATT | | | 100 | ms |
| Debounce interval provided by USB system software after attach (Figure 2-18) | tATTDB | | | 100 | ms |
| Maximum duration of suspend averaging interval | tSUSAVGI | | | 1 | s |
| Period of idle bus before device can initiate resume | tWTRSM | | 5 | | ms |
| Duration of driving resume upstream | tDRSMUP | | 1 | 15 | ms |

| Parameter | Symbol | Conditions | MIN. | MAX. | Unit |
|---|------------------------|--------------------------|------|-------|-----------|
| Hub Event Timings (Continued) | | | | | |
| Resume recovery time | t _{RSMRCY} | Remote-wakeup is enabled | 10 | | ms |
| Time to detect a reset from upstream for non high-speed capable devices | t _{DETRST} | | 2.5 | 10000 | μs |
| Reset recovery time (Figure 2-18) | t _{RSTRCY} | | | 10 | ms |
| Inter-packet delay for full-speed | t _{IPD} | | 2 | | Bit times |
| Inter-packet delay for device response with detachable cable for full-speed | t _{RSPDP1} | | | 6.5 | Bit times |
| SetAddress() completion time | t _{DSETADDR} | | | 50 | ms |
| Time to complete standard request with no data | t _{DRQCPLTND} | | | 50 | ms |
| Time to deliver first and subsequent (except last) data for standard request | t _{DRETDATA1} | | | 500 | ms |
| Time to deliver last data for standard request | t _{DRETDATAN} | | | 50 | ms |
| Time for which a suspended hub will see a continuous SE0 on upstream before beginning the high-speed detection handshake | t _{FILTSE0} | | 2.5 | | μs |
| Time a hub operating in non-suspended full-speed will wait after start of SE0 on upstream before beginning the high-speed detection handshake | t _{WTRSTFS} | | 2.5 | 3000 | ms |
| Time a hub operating in high-speed will wait after start of SE0 on upstream before reverting to full-speed | t _{WTREV} | | 3.0 | 3.125 | ms |
| Time a hub will wait after reverting to full-speed before sampling the bus state on upstream and beginning the high-speed will wait after start of SE0 on upstream before reverting to full-speed | t _{WTRSTHS} | | 100 | 875 | ms |
| Minimum duration of a Chirp K on upstream from a hub within the reset protocol | t _{UCH} | | 1.0 | | ms |
| Time after start of SE0 on upstream by which a hub will complete its Chirp K within the reset protocol | t _{UCHEND} | | | 7.0 | ms |
| Time between detection of downstream chip and entering high-speed state | t _{WTHS} | | | 500 | μs |
| Time after end of upstream Chirp at which hub reverts to full-speed default state if no downstream Chirp is detected | t _{WTFS} | | 1.0 | 2.5 | ms |

Figure 2-9. Transmit Waveform for Transceiver at DP/DM

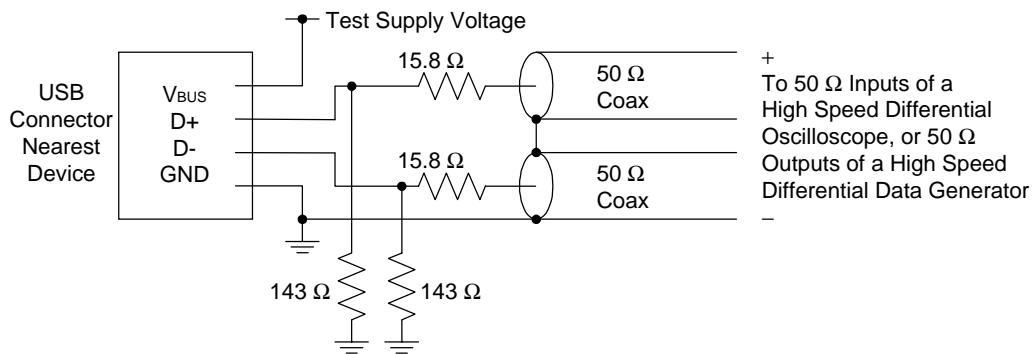

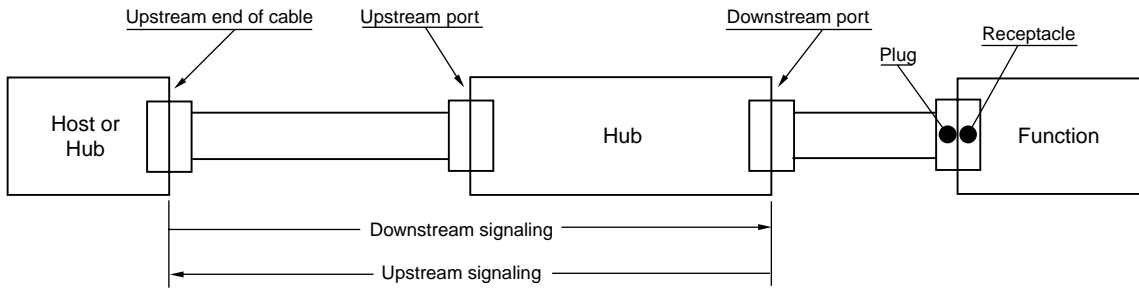

Figure 2-10. Transmitter Measurement Fixtures

Timing Diagram

Figure 2-11. Hub Differential Delay, Differential Jitter, and SOP Distortion

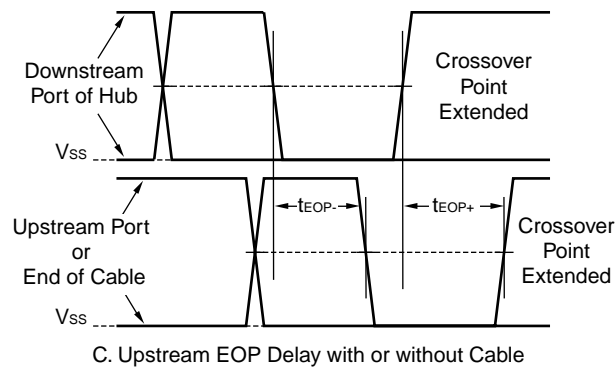

Hub Differential Jitter:
 $t_{HDJ1} = t_{HDDx}(J) - t_{HDDx}(K)$ or $t_{HDDx}(K) - t_{HDDx}(J)$ Consecutive Transitions
 $t_{HDJ2} = t_{HDDx}(J) - t_{HDDx}(J)$ or $t_{HDDx}(K) - t_{HDDx}(K)$ Paired Transitions

Bit after SOP Width Distortion (same as data jitter for SOP and next J transition):
 $t_{FSOP} = t_{HDDx}(\text{next J}) - t_{HDDx}(\text{SOP})$

Low-speed timings are determined in the same way for:
 t_{LHDD} , t_{LDHJ1} , t_{LDHJ2} , t_{LUHJ1} , t_{LUHJ2} , and t_{LSOP}

Figure 2-12. Hub EOP Delay and EOP Skew

EOP Delay:
 $t_{FEOPD} = t_{EOPy} - t_{HDDx}$
 (t_{EOPy} means that this equation applies to t_{EOP-} and t_{EOP+})

EOP Skew:
 $t_{FHESK} = t_{EOP+} - t_{EOP-}$

Low-speed timings are determined in the same way for:
 t_{LEOPD} and t_{LHESK}

Figure 2-13. USB Differential Data Jitter for Low-/full-speed

3. PACKAGE DRAWING

48-PIN PLASTIC TQFP (FINE PITCH) (7x7)

NOTE

Each lead centerline is located within 0.10 mm of its true position (T.P.) at maximum material condition.

| ITEM | MILLIMETERS |
|------|---|
| A | 9.0±0.2 |
| B | 7.0±0.2 |
| C | 7.0±0.2 |
| D | 9.0±0.2 |
| F | 0.75 |
| G | 0.75 |
| H | 0.22 ^{+0.05} _{-0.04} |
| I | 0.10 |
| J | 0.5 (T.P.) |
| K | 1.0±0.2 |
| L | 0.5±0.2 |
| M | 0.145 ^{+0.055} _{-0.045} |
| N | 0.10 |
| P | 1.0±0.1 |
| Q | 0.1±0.05 |
| R | 3° ^{+7°} _{-3°} |
| S | 1.27 MAX. |

S48GA-50-9EU-2

4. RECOMMENDED SOLDERING CONDITIONS

The μPD720114 should be soldered and mounted under the following recommended conditions.

For soldering methods and conditions other than those recommended below, contact an NEC Electronics sales representative.

For technical information, see the following website.

Semiconductor Device Mount Manual (<http://www.necel.com/pkg/en/mount/index.html>)

μPD720114GA-9EU-A: 48-pin plastic TQFP (Fine pitch) (7 × 7)

| Soldering Method | Soldering Conditions | Symbol |
|------------------|--|------------|
| Infrared reflow | Package peak temperature: 260°C, Time: 60 seconds max. (at 220°C or higher), Count: Three times or less Exposure limit: 3 days ^{Note} (after that, prebake at 125°C for 10 hours) Flux: Rosin flux with low chlorine (0.2 Wt% or below) recommended. | IR60-103-3 |
| Partial heating | Pin temperature: 300°C max., Time: 3 seconds max. (per pin row) | — |

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

[MEMO]

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ POWER ON/OFF SEQUENCE

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ INPUT OF SIGNAL DURING POWER OFF STATE

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

- **The information in this document is current as of May 2005. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
