

AZ10EL16VO

AZ100EL16VO

ECL/PECL Oscillator Gain Stage and Buffer with Enable

FEATURES

- Green and RoHS Compliant Available
- 250ps Propagation Delay on \bar{Q} Output
- High Voltage Gain vs. Standard EL16
- For Oscillator Applications
- Available in 2x2 or 3x3mm MLP Package
- 75k Ω Enable Pull-Down Resistor
- S-Parameter (.s2p) and IBIS Model Files Available on Arizona Microtek Website

DESCRIPTION

The AZ10/100EL16VO is an oscillator gain stage with a high gain output buffer including an enable. The Q_{HG}/\bar{Q}_{HG} outputs have a voltage gain several times greater than the Q/\bar{Q} outputs. An enable input (\bar{EN}) allows continuous oscillator operation. When \bar{EN} is LOW or floating (NC), input data is passed to both sets of outputs. When \bar{EN} is HIGH, the Q_{HG}/\bar{Q}_{HG} outputs will be forced LOW/HIGH respectively, while input data will continue to be passed to the Q/\bar{Q} outputs. The \bar{EN} input can be driven with an ECL/PECL signal or a CMOS logic signal.

The input impedance of the D/\bar{D} inputs remain constant for all operating modes since forcing the outputs via the \bar{EN} pin does not power-down the chip but only disables the high gain Q_{HG}/\bar{Q}_{HG} outputs.

Input protection diodes are included on the D/\bar{D} inputs for enhanced ESD protection.

The EL16VO also provides a V_{BB} output that supports 1.5mA sink/source current. When used, the V_{BB} pin should be bypassed to ground or V_{CC} via a 0.01 μ F capacitor.

Any used output must have an external pull down resistor. For 3.3V operation, an 180 Ω resistor to V_{EE} is recommended if an AC coupled load is present. At 5.0V, a 330 Ω resistor is recommended for the AC load case. Alternately, a 50 Ω load terminated to $V_{CC} - 2V$ or the Thevenin equivalent may be driven directly. Unused outputs may be left floating (NC).

NOTE: Specifications in ECL/PECL tables are valid when thermal equilibrium is established.

PIN/PAD DESCRIPTION

PIN	FUNCTION
D/\bar{D}	Data Inputs
Q/\bar{Q}	Data Outputs
Q_{HG}/\bar{Q}_{HG}	Data Outputs w/High Gain
V_{BB}	Reference Voltage Output
\bar{EN}	Enable Input
V_{CC}	Positive Supply
V_{EE}	Negative Supply

Arizona Microtek, Inc. reserves the right to change circuitry and specifications at any time without prior notice. Arizona Microtek, Inc. makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Arizona Microtek, Inc. assume any liability arising out of the application or use of any product or circuit and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Arizona Microtek, Inc. does not convey any license rights nor the rights of others. Arizona Microtek, Inc. products are not designed, intended or authorized for use as components in systems intended to support or sustain life, or for any other application in which the failure of the Arizona Microtek, Inc. product could create a situation where personal injury or death may occur. Should Buyer purchase or use Arizona Microtek, Inc. products for any such unintended or unauthorized application, Buyer shall indemnify and hold Arizona Microtek, Inc. and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Arizona Microtek, Inc. was negligent regarding the design or manufacture of the part.
