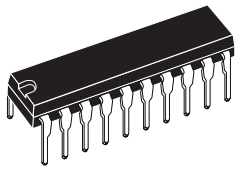
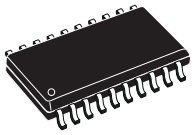
TDA7331

SINGLE CHIP RDS DEMODULATOR + FILTER

- VERY HIGH RDS DEMODULATION QUALITY WITH IMPROVED DIGITAL SIGNAL PROCESSING
- HIGH PERFORMANCE, 57KHz BANDPASS FILTER (8th ORDER)
- PURELY DIGITAL RDS DEMODULATION WITHOUT EXTERNAL COMPONENTS
- ARI INDICATION AND RDS SIGNAL QUALITY OUTPUTS
- 4.332MHz CRYSTAL OSCILLATOR (8.664 and 17.328MHz SELECTABLE OPTIONS)
- LOW NOISE CMOS TECHNOLOGY
- LOW RADIATION





DIP20 **SO20**

ORDERING NUMBERS:

TDA7331 TDA7331D

DESCRIPTION

The TDA7331, an improved version of TDA7330B, recovers the additional inaudible RDS information which is transmitted by FM radio broadcasting stations and operates in accordance with the EBU (European Broadcasting Union) specifications.

The device is made up of two sections: a cascaded antialiasing + switched capacitors bandpass filter for precise RDS band selection and a demodulating section that performs the extraction od RDS data stream (RDDA) and clock (RDCL), to be furher processed by a suitable RDS decoder.

Outputs for RDS signal quality and ARI indication are also present.

OUTPUT TIMING

The RDS (1187.5Hz) output clock on RDCL line is synchronized to the incoming data.
According to the internal PLL lock condition data change can result on the falling or on the rising clock edge. (see Fig. 1)
Whichever clock edge is used by the decoder (rising or falling edge) the data will remain valid for 416.7 µsec after the clock transition.

OSCILLATOR CONTROLS (FSEL, OSEL)

Three different crystal frequencies can be used. The adaption of the internal clock divider to the external crystal is achieved via the input pin FSEL. See the followings table for reference:

Crystal	**FSEL** (pin configuration)
4.332MHz	connected to GND or open
8.664MHz	connected to Vs
17.328MHz	external resistor of 100K to Vs

A special mode is introduced to reduce EMI. With pin OSEL connected to GND the internal oscillator is switched off and an external sinusoidal frequency could be applied on OSCIN. The peak to peak voltage of this signal can be reduced down to 60mV.

In this mode the frequency selection via FSEL is still active.

Suggested values of C1 and C2 are shown in the following table:

Crystal	**C1**	**C2**
4.332MHz	27pF	47pF
8.664MHz	27pF	-
17.328MHz	27pF	-
